Fire protection systems

Welcome to Customer Service

Service telephone: +49 (0)2373 89-1500

Telefax for enquiries: +49 (0)2373 89-7777

Telefax for orders: +49 (0)2373 89-7755

E-mail: info@obo.de

Internet: www.obo.de

Use the direct line to OBO Customer Service! On the Service Hotline +49 (0)2373 89-1500, we are available every day from 7.30 a.m. to 5.00 p.m. for any questions about the OBO product range for electrical installations. The newly structured OBO Customer Services can offer you the full works:

- Competent contacts from your region
- All the information on the OBO product range
- Knowledgeable advice on special application topics
- Quick, direct access to all the technical data of the OBO products – we also want to provide the best in customer relations!

OBO BSS seminars: First-hand knowledge

With a comprehensive programme of training courses and seminars on the subject of fire protection systems, OBO is able to support its customers with specialist knowledge from a single source. Alongside the basic theoretical principles, the programme also deals with practical implementation in everyday applications. Special calculation and application examples round off the comprehensive programme of knowledge transfer.

Invitations to tender, product information and datasheets

We can make life easier for you, with our comprehensive selection of materials designed for practical applications, which provide you with effective support with the planning and calculation of a project. These include:

- Invitations to tender
- Product information
- Information sheets
- Datasheets

These documents are continually updated and can be downloaded at no charge at any time from the Internet download area at www-obode.de.

Invitations to tender on the Internet at www.ausschreiben.de

More than 10,000 entries from the KTS, BSS, TBS, LFS, EGS and UFS ranges can be called up free of charge. Regular updates and extensions mean that you always have a comprehensive overview of the OBO products. All the current file formats – PDF, DOC, GAEB, HTML, TEXT, XML, ÖNORM – are available.

Compact fire protection knowledge. The new fire protection guide

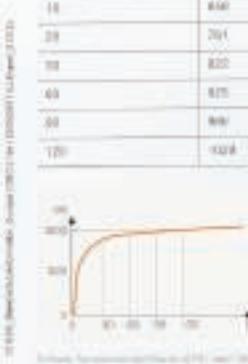

Nowadays, fire protection presents many planners and installation engineers of building equipment with almost insurmountable obstacles. Installations run like networks through complex building structures.

The art of the planner is to harmonise the various networks, such as supply and disposal, heating, ventilation and air-conditioning, with the electrical installation. That in itself is difficult. In addition, the thought of building safety has been at the forefront for several years now. The sensitivity towards fire protection in buildings is growing.

As soon as the first step towards fire protection planning has been completed, the appropriate systems and components are installed. Here, too, installation engineers are confronted with requirements which cannot be implemented without further work.

Zeit in Minuten	Temperaturanstieg in Kelvin
0	0
10	460
20	701
30	822
40	875
50	900
120	1020

After erection, the fire protection building equipment must be ready for acceptance. All the installations must be executed properly and the appropriate fire protection proofs must be available.

In the fire protection guide, we wish to explain the interconnections of fire protection in technical building equipment.

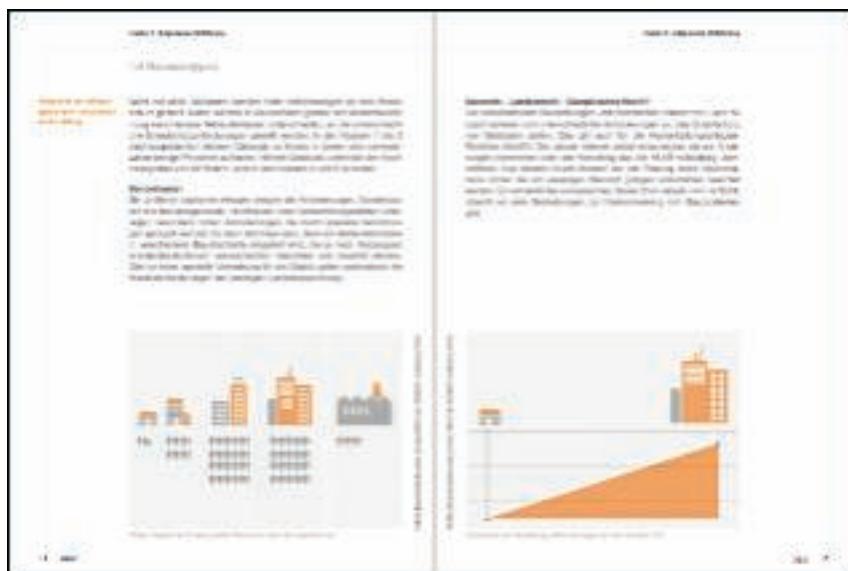

Perhaps you will find some new aspects which can help you in the planning or implementation of fire protection systems.

Request your copy from our Customer Service department now.

Practical: the structure of the fire protection guide

Chapter 1: General introduction

Here, we can give you important basic principles of constructive fire protection:

- Construction law
- What is fire protection?
- Fire protection concepts
- Building types
- What happens during a fire?
- Construction law protection aims

Chapter 2: Maintenance of the fire sections - First protection aim

- Components closing rooms, fire walls
- Requirements for cable penetrations
- Proofs of application
- Tests
- Insulation systems, construction types
- Applications and special applications
- Building in old buildings

Chapter 3: Protection of escape routes – Second protection aim

- What is an emergency and escape route?
- Problem: Fire loads
- Safe routing options
- Proofs of application

4.1.1 Function maintenance

What is function maintenance? Function maintenance is concerned with the ability of an electrical system to fulfil its intended function. Function maintenance must be carried out in accordance with relevant standards.

4.1.1 Function maintenance

Function maintenance of electrical systems is concerned with the ability of an electrical system to fulfil its intended function. Function maintenance is concerned with the ability of an electrical system to fulfil its intended function. Function maintenance is concerned with the ability of an electrical system to fulfil its intended function.

Chapter 4: Function maintenance for electrical systems – Third protection aim

- What is electrical function maintenance?
- Tasks of function maintenance
- Proofs of application
- Installation types
- Special features of vertical routing
- Function maintenance with fire protection ducts
- Limits of function maintenance
- Fastenings

4.2.1 Fire protection

What is fire protection? Fire protection is concerned with the ability of an electrical system to fulfil its intended function in the event of a fire. Fire protection is concerned with the ability of an electrical system to fulfil its intended function in the event of a fire. Fire protection is concerned with the ability of an electrical system to fulfil its intended function in the event of a fire.

4.2.1 Fire protection

Fire protection is concerned with the ability of an electrical system to fulfil its intended function in the event of a fire. Fire protection is concerned with the ability of an electrical system to fulfil its intended function in the event of a fire. Fire protection is concerned with the ability of an electrical system to fulfil its intended function in the event of a fire.

Chapter 5: Additional protection aims

- Protection of property and the environment
- Industrial fire protection

4.3.1 Protection against lightning

What is protection against lightning? Protection against lightning is concerned with the ability of an electrical system to fulfil its intended function in the event of a lightning strike. Protection against lightning is concerned with the ability of an electrical system to fulfil its intended function in the event of a lightning strike. Protection against lightning is concerned with the ability of an electrical system to fulfil its intended function in the event of a lightning strike.

4.3.1 Protection against lightning

Protection against lightning is concerned with the ability of an electrical system to fulfil its intended function in the event of a lightning strike. Protection against lightning is concerned with the ability of an electrical system to fulfil its intended function in the event of a lightning strike. Protection against lightning is concerned with the ability of an electrical system to fulfil its intended function in the event of a lightning strike.

Chapter 6: Fire protection from OBO Bettermann

- Insulation systems
- Escape route installation systems
- Function maintenance systems
- Industrial fire protection systems
- Engineering and support

The new generation is here: OBO Construct Professional and OBO Construct Web.

We have reinvented our Construct planning software: we have bundled all the electronic planning aids under the name OBO Construct.

Two versions

There are now two versions of OBO Construct: Construct Web and Construct Professional. They are now aligned to the different requirements of our customers and offer the following scope of service:

OBO Construct Professional

The completely new tool for professional users. The new multilingual AutoCAD plug-in is available in various languages and offers a wealth of benefits:

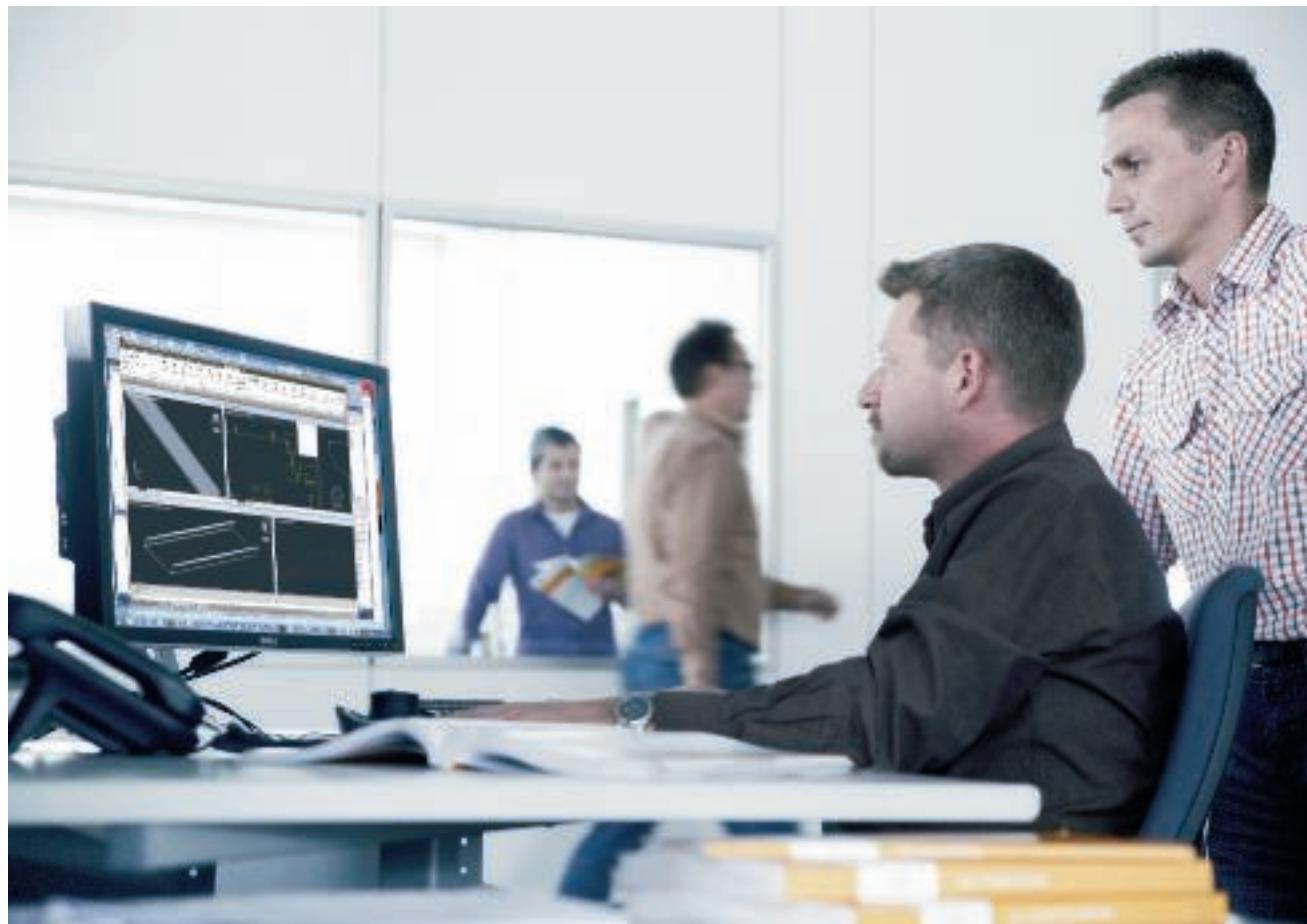

- Redesigned user dialogues
- Simplified operation
- Improved component depiction
- Individual adjustment of object display
- Completely new system (runs on 64-bit systems)
- Mass determination with additional materials
- Output of the mass determination in various formats (Excel, PDF, Text)
- Simple updates
- Importable and editable invitations to tender

OBO Construct Web

The Internet version for rapid help now no longer needs a CAD system and offers the following benefits:

- Simple operation
- For quick and easy application
- Platform-independent
- No installation required
- Access possible from anywhere
- Option of saving project data
- Plans can be printed out as PDFs
- Exact mass determination in an Excel file
- Additional material bookable

OBO Construct KTS: Project planning, drawing, generation

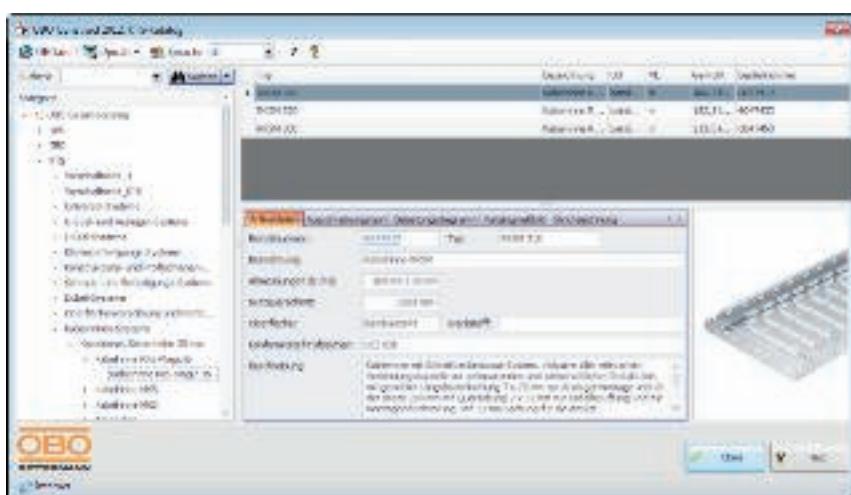

General planning
aids

Find out now

Convince yourself about the new OBO Construct: a new support and training concept makes it easier than ever for you to take your first steps. You can find additional information on the Internet or from our Customer Service.

AutoCAD is a registered trademark
of Autodesk Incorporation, USA.

Selection aid, insulation in solid components

This overview is intended to help you choose the suitable insulation system for the installations made in solid walls and ceilings. In the case of ceiling insulation, it should be noted that some systems must

be secured on the underside of the ceiling against falling out. In addition, people must be prevented from walking on the insulation measures in ceilings.

	Cable				
	PYROMIX	Yes	Yes	Yes	Yes
	PYROPLATE Fibre	Yes	Yes	-	-
	PYROSIT NG	Yes	Yes	-	Yes
	PYROBAG	Yes	Yes	-	-

-	Yes	-	Yes	-	-	-
-	-	-	-	-	-	-

Selection aid, insulation in light-duty partitions

This overview is intended to help you choose the suitable insulation system for the installations made in light-duty partitions with moisture resistance. The subconstruction of the light-duty partitions is usually made of metal stands and bolts, which are surrounded on

each side by fire protection plates, fastened in two layers. Light-duty partitions are not supporting components, meaning that fire protection fastening, e.g. for function maintenance, cannot be implemented.

	Cable				Hollow shaft conductor
	Cable bundle				Kupa pipes

-	Yes	-	Yes	-	-
-	-	-	-	-	-

Selection aid, insulation, special applications

This overview is intended to help you find the suitable insulation system for the special electrical installation applications in the field of

cable routing ducts, underfloor systems and case lining pipes.

		Underfloor ducts screed-covered	Underfloor ducts screed-flush	Metal ducts	Plastic ducts	PVC lining pipes
	PYROSIT NG	Yes	Yes	-	-	Yes
	PYROBAG	-	-	Yes	Yes	Yes
	PYROPLUG blocks	Yes	Yes	-	-	-

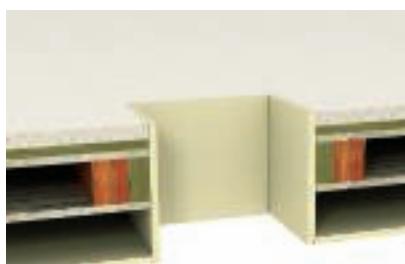

Special application for refurbishment of buildings (building in existing buildings)

The following applies to all old building ceilings and wall constructions made of special components (sandwich elements): mounting of insulation systems is approved when this kind of application is included in the approval. In conjunction with the construction authorities, insulation systems can be used, which, according to the approval, are approved for a similar application, e.g. within a layer of non-combustible materials.

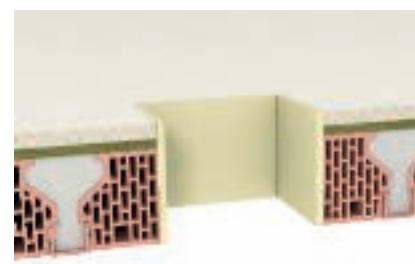

Important note: Before mounting, always obtain the approval from the client, e.g. construction supervision or fire brigade. Get in touch with us, we'd be glad to help you!

Wooden beam ceiling

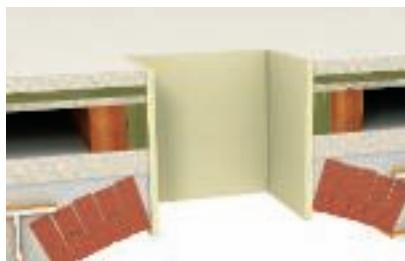

Wooden beam ceiling with fire protection ceiling

Ribbed ceiling

Cavity chamber ceiling

Cap cover

Beamed ceiling

Planning aid, PYROMIX® mortar insulation

System description, PYROMIX® mortar insulation	20
Installation principle, PYROMIX® mortar insulation	21

Stir the mortar with water to achieve the desired consistency

Apply mortar to the opening, use lining as necessary

Use approved section insulation for metal pipes

Section insulation should also be applied to steel electrical installation pipes

Mount pipe sleeves for combustible pipes on both sides of the wall

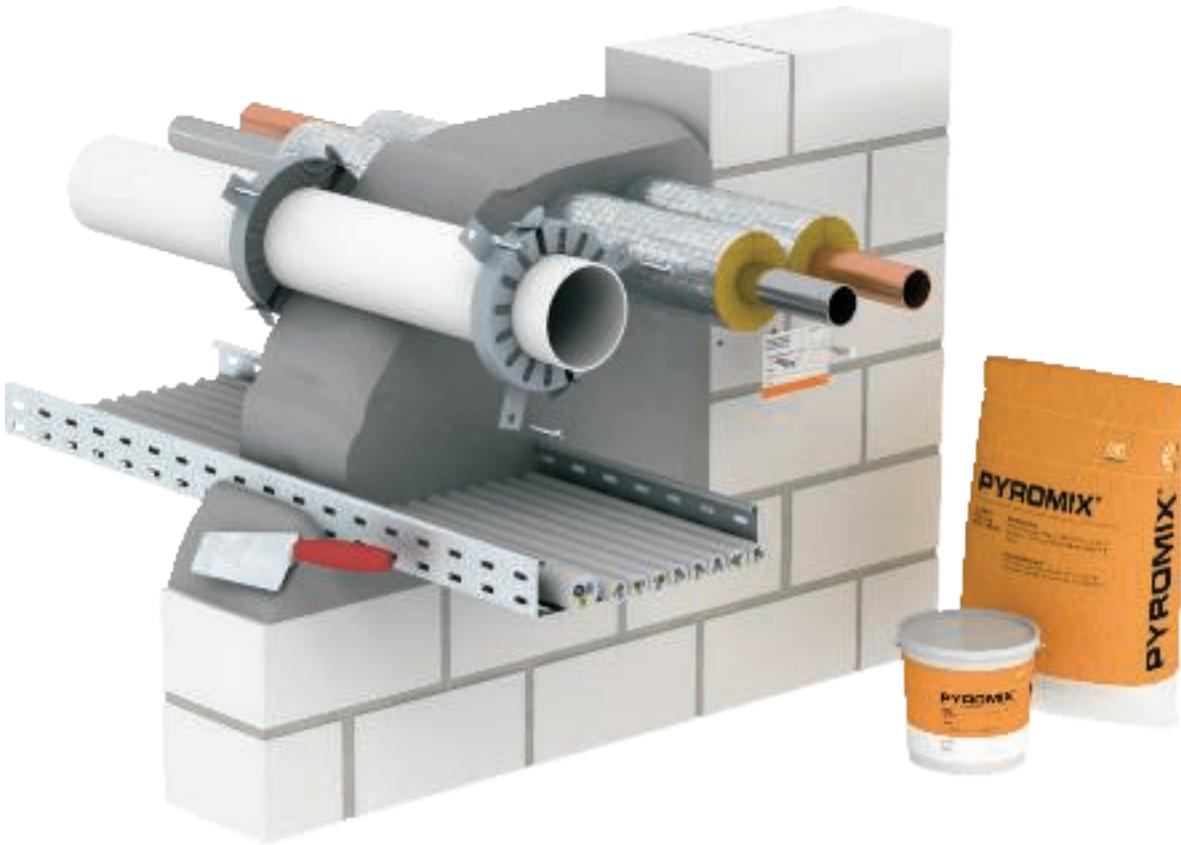

Combination insulation for various structures with labelling

PYROMIX® is a special mortar, free of mineral fibres, for the creation of cable and combination insulation. Depending on the amount of water added, the finished compound can be applied to the openings by hand, with pumps or with presses. The high level of substrate adhesion make lining unnecessary for small insulation sizes. A porous consistency makes retroinstallation easy.

System benefits

- Combination of multiple installations possible
- Many approved section insulations, even Armaflex or Foamglas
- Free of mineral fibres
- Hollow shaft conductors permitted
- Good substrate adhesion
- Can even be used with small component thicknesses
- Required consistency can be achieved by adding water
- Easy retroinstallation

Installation principle, PYROMIX® mortar insulation

Planning aid, PYROMIX®
mortar insulation

S90

Mineral special mortar, hard insulation

Fire resistance class	S90
Proof of application	General construction approval of DIBt, Berlin
Approval number	Z-19.15-2046
Testing standard	DIN 4102 Part 9

Insulation dimensions in cm

Component	Solid wall	Solid ceiling
Min. component strength	10	15
Min. insulation thickness	15	15
Opening width, max.	100 (200)	100
Opening height, max.	200 (100)	-
Max. length	-	Unlimited

Maximum approved assignment of the opening area with installations: 60%. The data in the named proofs of applicability apply.

Planning aid, PYROPLATE® Fibre soft insulation

System description, PYROPLATE® Fibre soft insulation 24

Installation principle, soft insulation, PYROPLATE® Fibre 25

Moisten the component layer and apply the coating to the cut edges for adhesion

Use approved section insulation for metal pipes

Apply the final coating to the surface and the installations

Fix pipe sleeves for combustible pipes with threaded rods on both sides

Combination insulation for various structures with labelling

Secure soft insulation in ceilings against footfall

OBO PYROPLATE® Fibre is a mineral fibre or soft insulation. The core of the system is the mineral fibre plate coated with a moisture-resistant ablation coating. When there is a fire, the fire protection coating forms an insulating carbon foam. Together with the mineral fibre plates, this provides effective prevention of the spread of fire and smoke. According to the construction approval, in addition to the cables, pipes made of steel, copper or various plastics may also be run through the same insulation. Therefore, the OBO PYROPLATE® Fibre is combination insulation for various structures. For pipelines, additional fire protection measures (section insulation and pipe sleeves) are required.

System benefits

- Combination of multiple installations possible
- Many approved section insulations
- Low insulation thickness - "Plate to plate"
- Pre-coated plate with final coating is visually tidy
- Moisture-resistant coating
- Easy retroinstallation

Installation principle, soft insulation, PYROPLATE® Fibre

S90

Mineral fibre plate with ablation coating, soft insulation

Fire resistance class	S90
Proof of application	General construction approval of DIBt, Berlin
Testing standard	DIN 4102 Part 9

Planning aid, PYROPOSIT® NG fire protection foam

System description, PYROPOSIT® NG fire protection foam	28
Installation principle, PYROPOSIT® NG fire protection foam	29
System description, PYROPOSIT® NG underfloor fire protection foam	30
Installation principle, PYROPOSIT® NG underfloor fire protection foam	31

System description, PYROSIT® NG fire protection foam

Clean the layer and attach the lining aids, e.g. adhesive tape

Apply the foam from the rear to the front, and remove residues as necessary

Use approved section insulation for metal pipes

Electrical installation pipes up to M40, filled with cables or empty

Combustible pipes up to Ø 50 mm can be run through without additional measures

Combination insulation for various structures with labelling

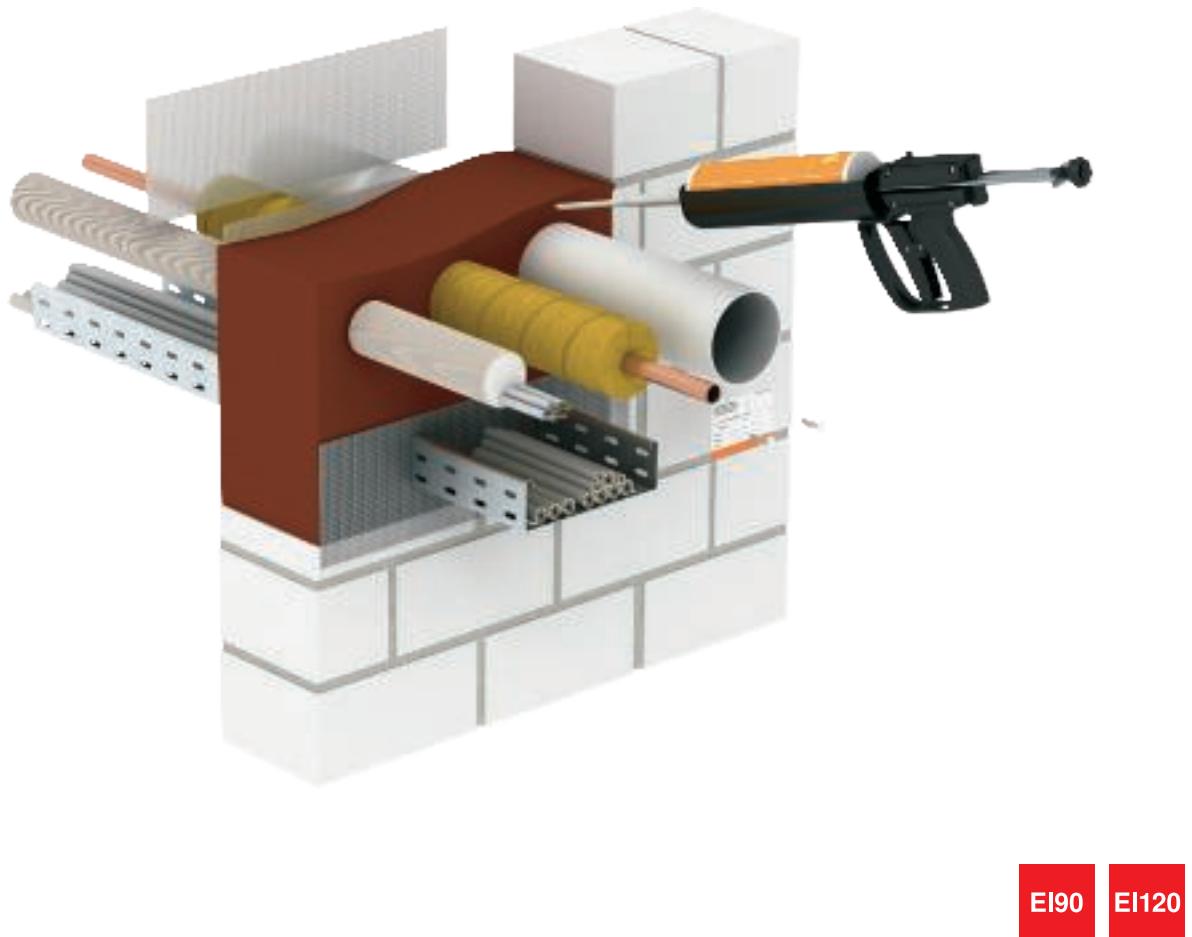

The PYROSIT® NG fire protection foam can offer many benefits in application and handling. Its particular recipe means that the two-component material can offer very homogeneous localised foam insulation. The chemical reaction is perfectly matched to any requirements. The good substrate adhesion prevents the foam from running out of the opening. Work can easily be interrupted to carry out checks. After the reaction process has been completed, PYROSIT® NG has a soft consistency, meaning that retroinstallations are very easy.

In addition to the cables, pipes made of steel, copper or various plastics may also be run through the same insulation. OBO PYROSIT® NG is therefore combination insulation for various structures.

System benefits

- Simple working, even with brief interruptions
- Good substrate adhesion
- Foam volume per cartridge up to 2.1 litres
- Soft consistency - easy retroinstallation
- No surface coatings required
- Dust and fibre-free installation
- Combination of multiple installations possible
- Many approved section insulations
- Battery pressing gun for large-scale use

Installation principle, PYROSIT® NG fire protection foam

2-component fire protection foam, localised foam

Fire resistance class	To EI120	To EI120
Proof of application	European technical approval of OIB, Vienna	Association of Cantonal Fire Insurers VKF, Berne
Approval number	ETA-11/0527	VKF 22552, 22553, 22554, 22555
Testing standard	EN 1366 Part 3	EN 1366 Part 3
Additive properties		
Heat penetration	Fraunhofer IBP Stuttgart	P1-001/2012; P1-002/2012
Air permeation/pressure resistance	ift Rosenheim	11-003694-PR01/02/03
Noise insulation	HfT Stuttgart	122-007-04P-186a

Insulation dimensions in cm

Component	Solid wall	Light-duty partition wall	Solid ceiling
Min. component strength	10	10	15
Min. insulation thickness (EI90/EI120)	20/25	20/25	20/25
Opening size, max.	45 x 45; Ø 30	45 x 45; Ø 30	45 x 45; Ø 30

Maximum approved assignment of the opening area with installations: 60%. The data in the named proofs of applicability apply.

System description, PYROSIT® NG underfloor fire protection foam

Invisible insulation in screed-covered underfloor ducts

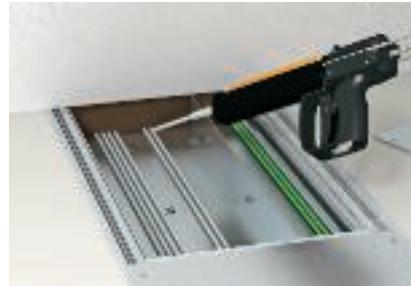

Use of the mixing tube with extension to apply the fire protection foam

Labelled underfloor insulation with reserve empty pipe

Invisible insulation in screed-flush underfloor ducts

Application of the fire protection foam directly under the wall

Empty pipes with tension wires can be foamed in for assignment at a later date

OBO's PYROSIT® NG fire protection foam is a quick and simple type of cable insulation for use in underfloor ducts. If, during an electrical installation, underfloor ducts pass below walls classified for fire protection, then the ducts must be closed against smoke gas penetration and fire.

With an open duct system, the duct lid is removed on both sides of the wall and the foam inserted on both sides. PYROSIT® NG is the ideal solution for use in screed-covered underfloor ducts: mounting is carried out, starting from the underfloor boxes on both sides of the wall. Plastic installation pipes can also be foamed in for later retroinstallations.

System benefits

- Applications covered by surveyor's comments
- Simple working, even with brief interruptions
- Good substrate adhesion, even on metal ducts
- Foam volume per cartridge up to 2.1 litres
- Soft consistency - easy retroinstallation
- Empty pipes may also be foamed in as a reserve opening
- No surface coatings required
- Dust and fibre-free installation

Installation principle, PYROSIT® NG underfloor fire protection foam

EI120

2-component fire protection foam, localised foam

Fire resistance class	To EI120	To EI120
Proof of application	European technical approval of the OIB, Vienna in conjunction with surveyor's report	Association of Cantonal Fire Insurers VKF, Berne
Approval number	ETA-11/0527	VKF 22552, 22553, 22554, 22555
Testing standard	EN 1366 Part 3	EN 1366 Part 3

Planning aid, PYROBAG® cushion insulation

System description, PYROBAG® cushion insulation	34
Installation principle, PYROBAG® cushion insulation	35
System description, cable routing duct, PYROBAG® cushion insulation	36
Installation principle, PYROBAG® cable routing duct cushion insulation	37

System description, PYROBAG® cushion insulation

Planning aid, PYROBAG® cushion insulation

Closing of the opening with cushions - without filler or coating

Panels as mounting aid for the last cushion layer

Lock against falling out during ceiling mounting

Lock against slippage above the floor

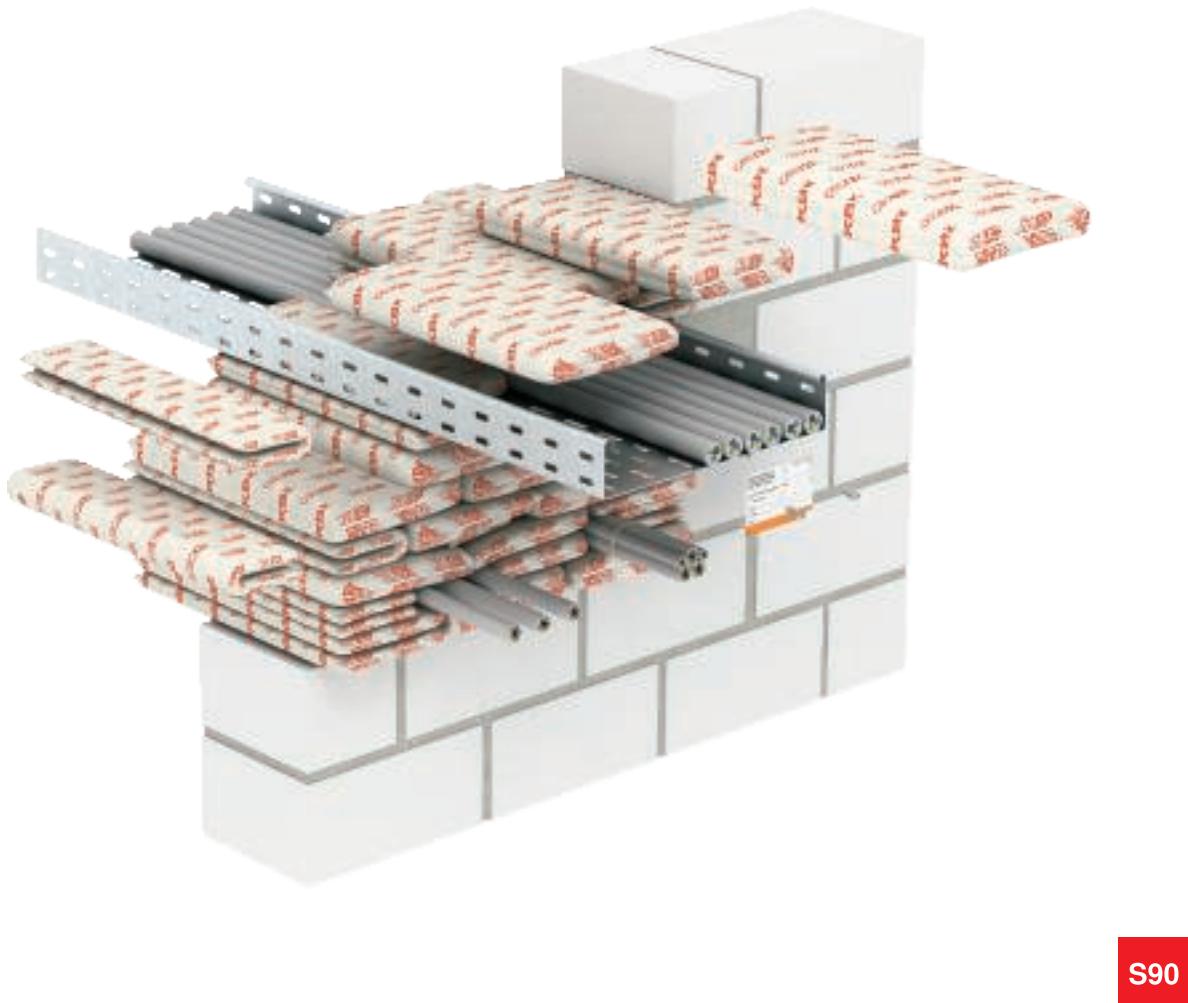

The OBO KBK cable fire protection cushions, which can adopt any shape, are ideal for simple, quick, absolutely tidy and dust-free mounting of the PYROBAG® cable insulation. The cushions can be used for permanent or temporary insulations in walls and ceilings, e.g. during reconstruction. Additional cables can be installed quickly, tidily and economically at a later date, as the cushions can be used several times over.

The cushions consist of a close-knit, dense and mechanically solid glass fabric with a special filling. The shell and the filling are free of mineral fibres and are also weatherproof and waterproof.

System benefits

- Simple, quick, tidy, dust-free mounting
- No coating or fillers required
- Ideal solution for frequent retroinstallation
- For permanent and temporary insulation
- Weatherproof and waterproof
- Free of mineral fibres

Installation principle, PYROBAG® cushion insulation

Planning aid, PYROBAG® cushion insulation

Glass mesh cushion with special fire protection filling

Fire resistance class	S90
Proof of application	General construction approval of DIBt, Berlin
Approval number	Z-19.15-1115
Testing standard	DIN 4102 Part 9

Insulation dimensions in cm

Max. length	-	-	Unlimited

Maximum approved assignment of the opening area with installations: 60%. The data in the named proofs of applicability apply.

System description, cable routing duct, PYROBAG® cushion insulation

Planning aid, PYROBAG® cushion insulation

Cushions arranged in the duct

Retaining profile to prevent slippage in vertical arrangements

Discreet attachment of the identification plate

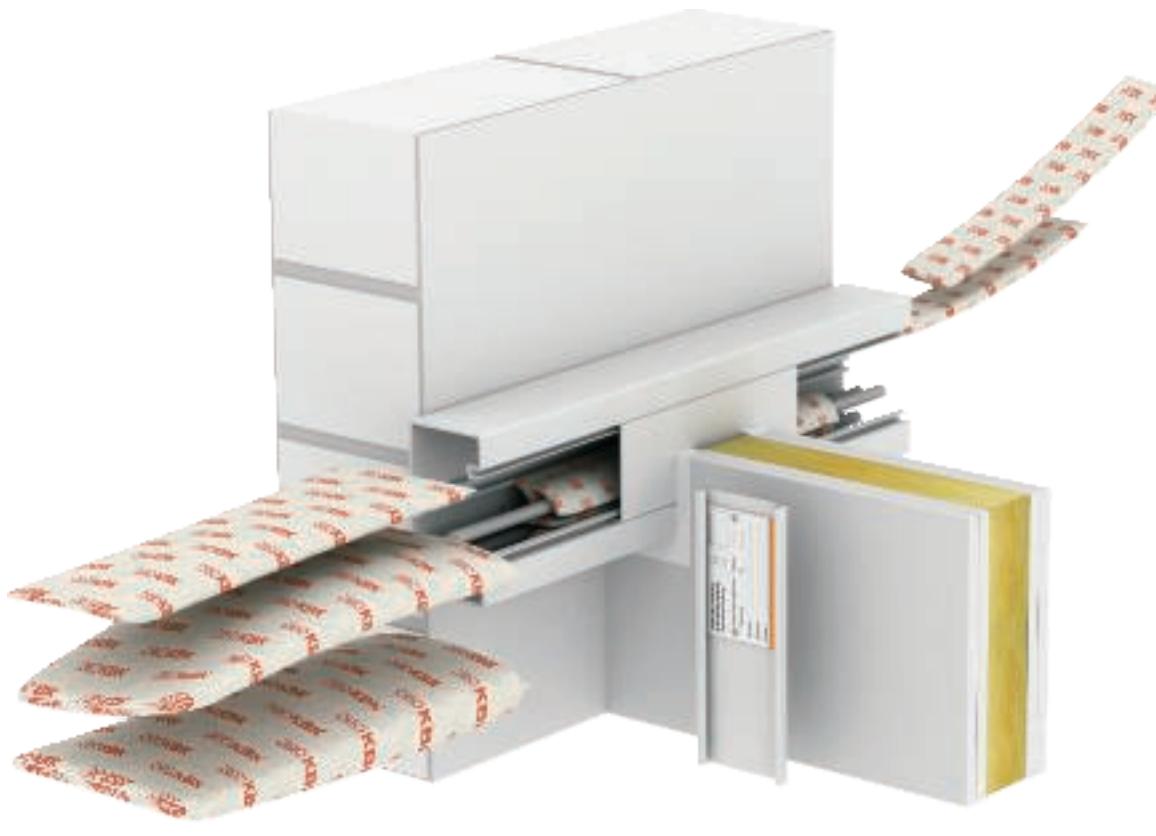

The PYROBAG® cable insulation, together with the OBO KBK cable fire protection cushion, is the ideal solution for insulation in PVC and metal cable routing ducts. Insulation with the cable fire protection cushions, which can be turned into any shape, can be mounted in a manner which is very easy, quick, clean and dust-free.

As the cushions are only mounted within the ducts, the cable insulation cannot be seen from the outside – this is the precondition for a perfect cable duct installation, which is usually subjected to particular optical requirements. The cushions can be used for permanent or temporary insulations in walls and ceilings. Additional cables can be installed quickly, tidily and economically at a later date, as the cushions can be used several times over.

System benefits

- Ideal solution for insulation in plastic and metal cable routing ducts
- Insulation in the interior of the duct invisible on the outside
- No visual impairment of the duct installation
- Simple, quick, tidy, dust-free mounting
- No coating or fillers required
- Retroinstallations possible at any time

Installation principle, PYROBAG® cable routing duct cushion insulation

	PYROPLUG® Block 120 stones	46
	PYROPLUG® Peg plugs	48
	PYROPLUG® Box box insulation	50
	PYROPLUG® Shell pipe shells	52
	PYROMIX® Mini small insulation	54

System description, PYROPLUG® Block 200 stones

Planning aid, PYROPLUG® foam series

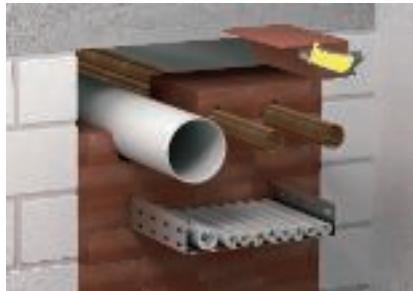

Mounting of the cut blocks

Vacuum blocks for simple residual gap closing

Simple retroinstallation through removal of individual blocks

Running of combustible pipes without additional measures

Run-through, non-combustible pipes with section insulation

Tight-fitting installation of the blocks in the ceiling penetration

The OBO PYROPLUG® Block 200 combination insulation is created from foam blocks, which, if there is a fire, expand without any noticeable pressure creation. In so doing, they form an insulating carbon foam. This reliably prevents the penetration of fire and smoke through the cable insulation.

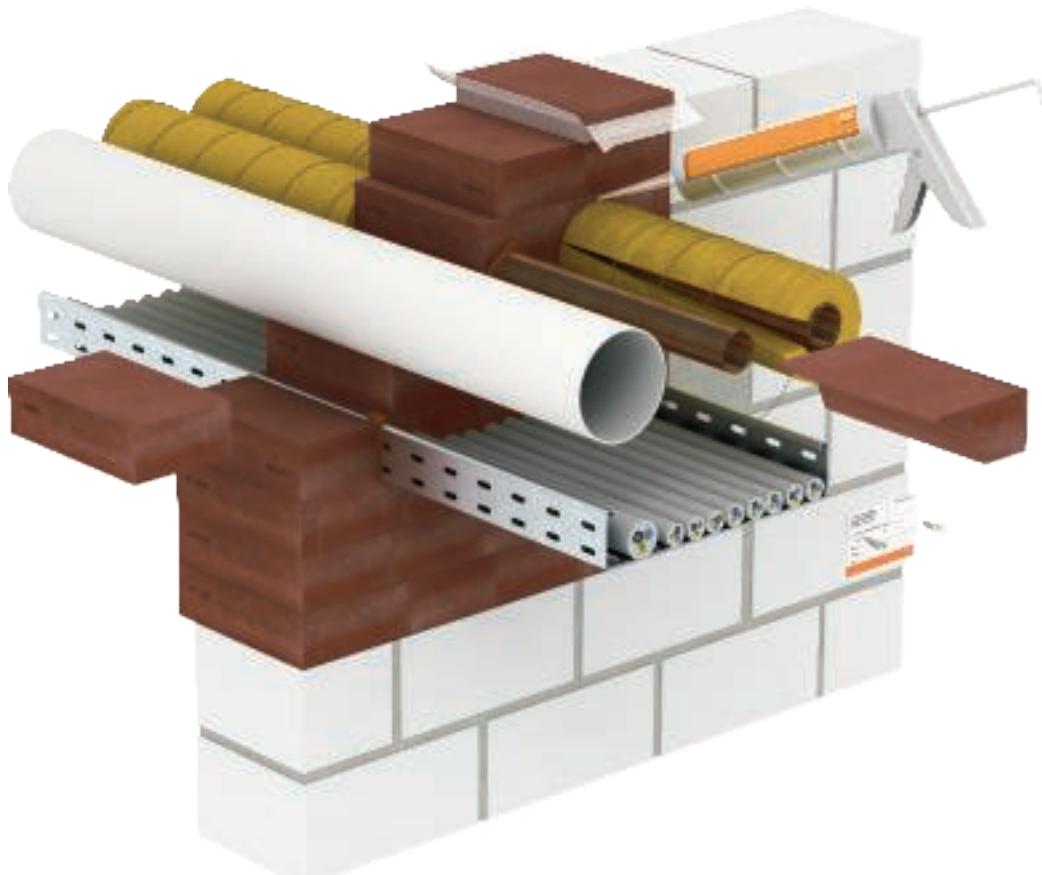

Combustible pipes can be run in this insulation without an additional sleeve. Copper and steel pipes can be insulated either with or without section insulation.

All the PYROPLUG® Block 200 insulation is completely dust and fibre-free. This also applies to any installations at a later date. This is an aspect, which is particularly important for installation in IT and laboratory rooms.

System benefits

- Combination insulation
- Running of combustible pipes without additional measures
- Running of non-combustible pipes with section insulation
- Simple, dust and fibre-free mounting
- Simple retroinstallation
- Residual joints closed with PYROPLUG® Screed filler (type FBA-SP)

Installation principle, stones PYROPLUG® Block 200

Maximum approved assignment of the opening area with installations: 60%. The data in the named proofs of applicability apply.

System description, PYROPLUG® Block 200 underfloor stones

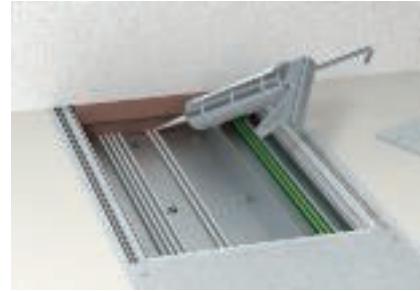

Planning aid, PYROPLUG® foam series

Invisible insulation in screed-flush underfloor ducts

Adjustment of the foam blocks with a knife

Closing of residual joints with the filler FBA-SP

Invisible insulation in screed-covered underfloor ducts

Cutting of thin strips for the duct compartments

Close the joints between cables and blocks with the FBA-SP filler

The OBO PYROPLUG® Block 200 cable insulation is the ideal cable insulation for use in underfloor ducts. If, during an electrical installation, underfloor ducts pass below walls classified for fire protection, then the ducts must be closed against smoke gas penetration and fire.

With an open duct system, the duct lid is removed on both sides of the wall and the blocks inserted on both sides. The PYROPLUG® Block 200 cable insulation can only be mounted on screed-covered underfloor ducts from the underfloor boxes on both sides of the wall. Retroinstallations can be carried out very easily by removing individual blocks.

System benefits

- Mounting directly in underfloor duct
- Invisible cable insulation
- Mounting of empty pipes to prepare for retroinstallations
- Dust and fibre-free mounting
- Residual joints closed with PYROPLUG® Screed filler (type FBA-SP)

Maximum approved assignment of the opening area with installations: 60%. The data in the named proofs of applicability apply.

System description, PYROPLUG® Block 220 stones

Planning aid, PYROPLUG® foam series

Mounting of the cut blocks

Cable reels according to the cable diameter and the fire resistance class

Vacuum blocks for simple residual gap closing

Simple retroinstallation through removal of individual blocks

Tight-fitting installation of the blocks in the ceiling penetration

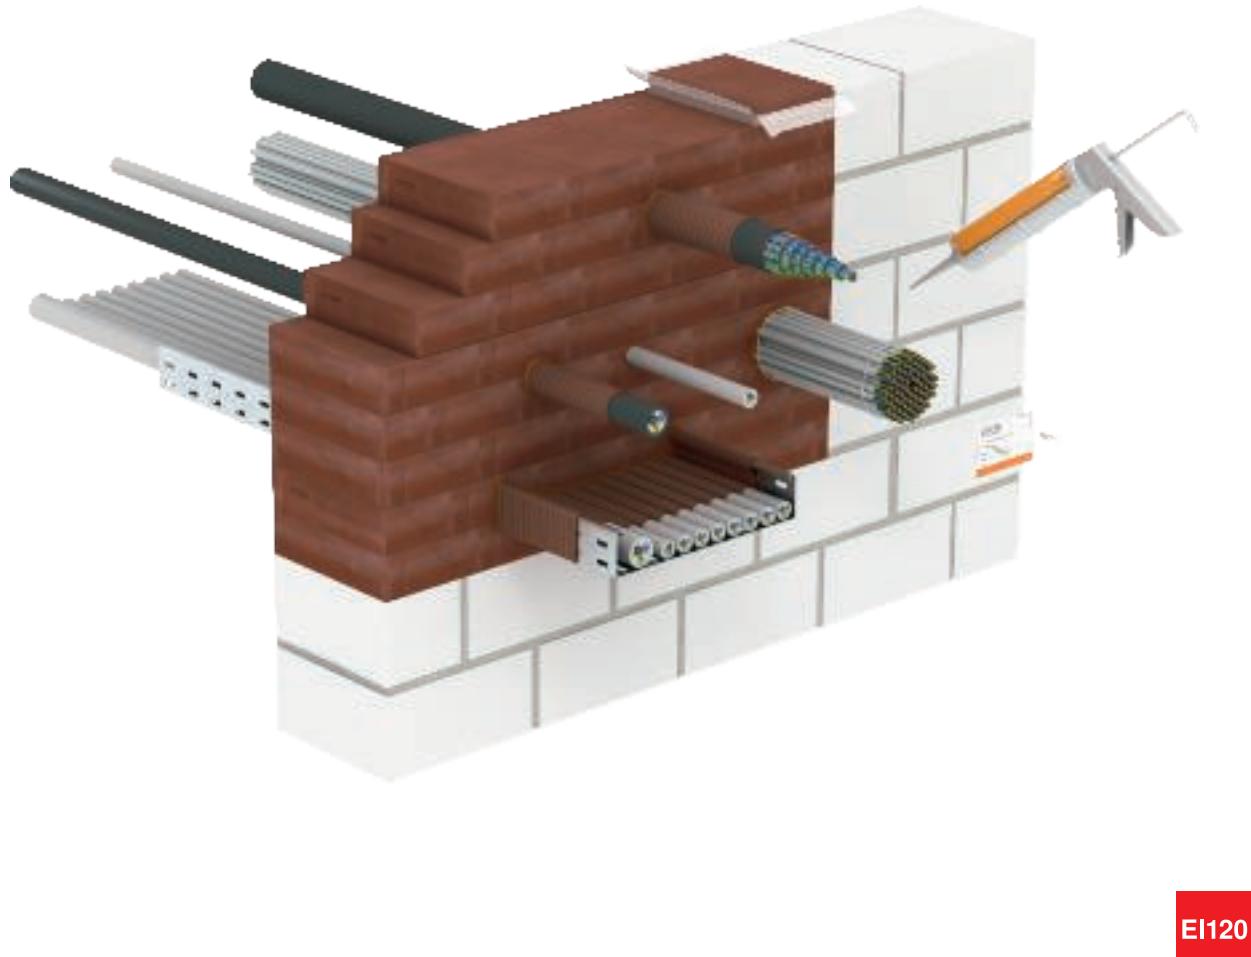

The OBO PYROPLUG® Block 220 cable insulation system is created from special foam blocks. The insulation system is particularly suitable for regular retroinstallations, e.g. in the fields of telecommunications and data processing. Here, it is primarily smaller cable cross-sections which are used. According to the ETA approval, a special coil is additionally required for the cables with a larger diameter and according to the fire resistance class. If there is a fire, this foams up and provides the appropriate heat insulation.

The PYROPLUG® Block 220 cable insulation can be created without any dust or fibres. This also applies to any installations at a later date. This is an aspect which is particularly important for installation in data processing and laboratory rooms.

System benefits

- Large dimensions require less blocks per insulation
- Routing of steel cable support systems permitted
- Ideal solution for use in the field of telecommunications and data processing
- Very suitable for regular retroinstallation of small cables
- Simple, dust and fibre-free mounting
- Simple retroinstallation
- Residual joints closed with PYROPLUG® Screed filler (type FBA-SP)

System description, PYROPLUG® Peg plugs

Planning aid, PYROPLUG® foam series

Cutting of the plugs for cable assignment on the edge of the core hole

Push cut plugs into the core hole

Mounting of the pipe shell in light-duty partition

Cutting and mounting of the plugs in the pipe shell

In case of full assignment, close off the residual joints with the FBA-SP filler

With retroinstallations, careful cutting and drilling of the plugs

The FBA plug is available in 8 different sizes for creation of the OBO PYROPLUG® Peg cable insulation. They consist of a permanently elastic, closed-pore foam. The FBA plugs are the ideal solution for closing core holes. The pipe shell FBA-SR is also required to create round cable insulation in lightweight partition walls. This variant of the PYROPLUG® Peg cable insulation consists of a two part, fixed pipe shell and two matching FBA plugs. The PYROPLUG® Peg insulation system can be used without difficulty in areas of data processing and in laboratories, as mounting is completely clean and is free or dust and fibres. This also applies to any necessary cable installations at a later date. Special tools are not required for processing, a knife is sufficient.

System benefits

- Ideal solution for core drill holes in solid walls and concrete ceilings
- Mounting also possible in light-duty partitions in combination with the FBA-SR pipe shell
- Full assignment of the pipe shell possible
- Group formation possible
- Simple, dust and fibre-free mounting
- Simple retroinstallation
- Residual joints closed with PYROPLUG® Screed filler (type FBA-SP)

Installation principle, PYROPLUG® Peg plug

Planning aid, PYROPLUG® foam series

System description, PYROPLUG® Box box insulation

Planning aid, PYROPLUG® foam series

Insertion of the split frame in light-duty partitions

Mounting of the frame with previously installed cables

Exact cutting of the internal pieces and then insertion in the frame

Closing joint component on full assignment with cables

Grouped arrangement of the boxes

The OBO PYROPLUG® Box cable insulation is a special system for simple mounting of cable insulation in light-duty partitions. Installation in solid walls and ceilings is also possible and approved.

The insulation system consists of a two-part frame and two matching internal pieces. As the internal area of the boxes is exactly 60% of the external area, it is impossible to over assign it with cables. This usable area corresponds to the maximum approval cable assignment.

System benefits

- Ideal solution for cable insulation in light-duty partition walls
- Full cable assignment possible
- Grouped arrangement of the frames approved
- Simple, dust and fibre-free mounting
- Simple retroinstallation
- Residual joints closed with PYROPLUG® Screed filler (type FBA-SP)

System description, PYROPLUG® Shell pipe shells

Planning aid, PYROPLUG® foam series

Drilling of a hole with a drill crown

Grouped arrangement of the drill holes

Insertion of the pipe shell in the light-duty partition

For previously installed cables, cutting of the pipe shell

Cutting and insertion of the plugs in the pipe shell

Full assignment of the pipe shell

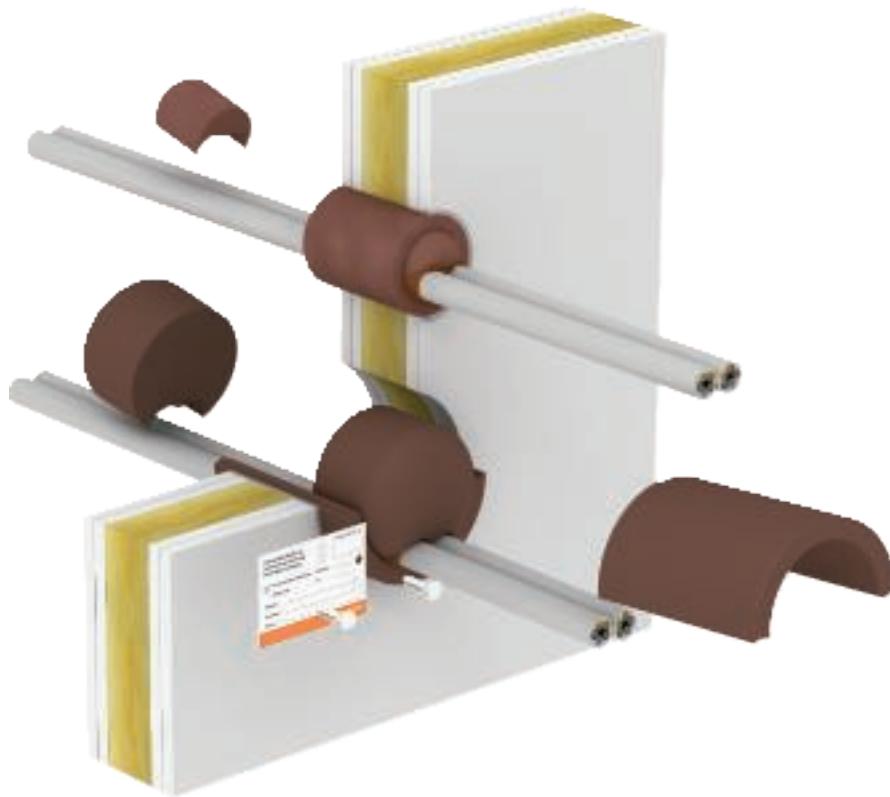

The OBO PYROPLUG® Shell cable insulation is the ideal solution for installing small round cable insulation quickly and simply, especially in light-duty partition walls.

The insulation system consists of a pipe shell and two matching plugs. The ratio of the external diameter to the internal diameter of the pipe shell ensures that over assignment with cables is not possible, even at full assignment.

System benefits

- Ideal solution for small, round cable insulation in light-duty partition walls
- Grouped arrangement of the pipe shells permitted
- Full cable assignment possible
- Simple, dust and fibre-free mounting
- Simple retroinstallation
- Residual joints closed with PYROPLUG® Screed filler (type FBA-SP)

Installation principle, PYROPLUG® Shell pipe shells

System description, PYROMIX® Mini small insulation

Planning aid, PYROPLUG® foam series

Closing of the opening with the filler FBA-SP

In light-duty partitions, use of the mini pipe shell FBA-DR

Complete assignment of the mini pipe shell

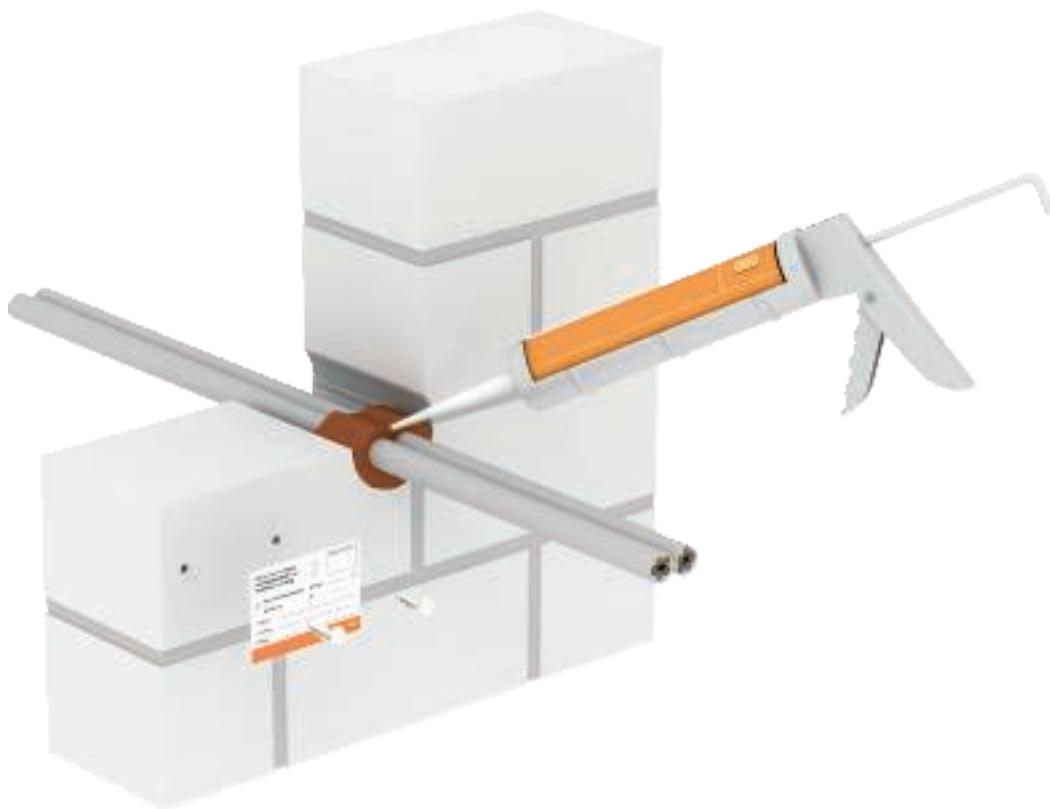

The OBO PYROPLUG® Mini cable insulation is a quick and simple option for creating small round cable insulations. It only consists of the one-component filler PYROPLUG® Screed (type FBA-SP).

The insulation may also be installed in light-duty partitions. The empty mini pipe shells FBA-DR are used to create the layers. The interior of these pipe shells may be completely assigned. Only the residual joints must be filled with the filler.

System benefits

- Only one component: PYROPLUG® Screed filler (type FBA-SP)
- Simple solution for small round cable insulation in walls and ceilings
- Mounting approved in combination with the mini pipe shell in light-weight partitions
- Simple, dust and fibre-free mounting
- Simple retroinstallation

Installation principle, PYROPLUG® Mini small insulation

S90

System description, PYROCOMB® pipe insulation	60
Installation principle, PYROCOMB® pipe insulation	61

System description, PYROCOMB® Tubes cable insulation

Planning aid, PYROCOMB® pipe sleeve

Two-sided arrangement of the pipe sleeves for wall mounting

Mounting on the underside of the ceiling with metal anchors

Closing of the ring gap with the insulation layer creator DSX

Combination of the sleeve halves and fastening on the wall

Closing of the pipe ends with the insulation layer creator DSX

Labelled insulation of installation pipe bundles

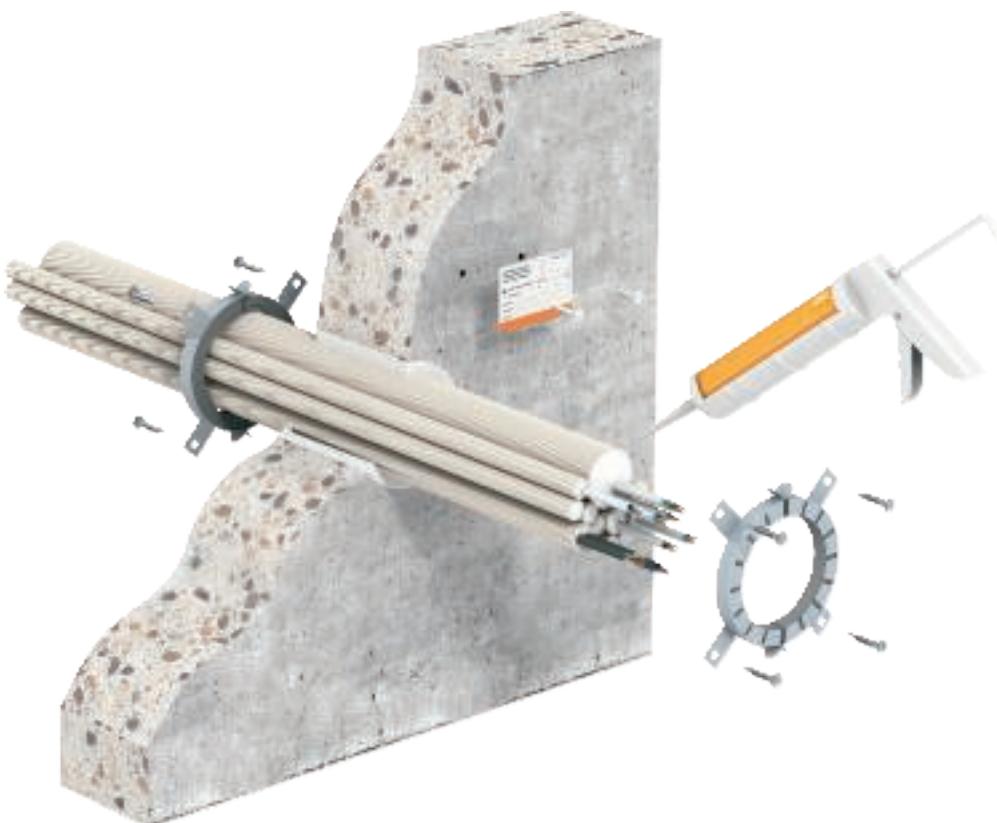

The PYROCOMB® Tubes cable insulation consists of multiple sizes of the pipe sleeve, type TCX, of the PYROCOMB® system. This allows simple insulation of bundles of plastic electrical installation pipes, rigid or flexible. It is irrelevant whether the pipes are filled with cables or are empty.

In case of fire, the fire protection material inserted within the seal foams up after a few minutes under high pressure, closing the softened bundles at a high pressure. This safely prevents the spread of fire and smoke, should a fire occur.

System benefits

- Simple solution for electrical installation pipe bundle
- Bundle diameter up to 125 mm
- Maximum pipe diameter in bundle M63
- Rigid and flexible pipes
- Pipes filled with cables (max. Ø 21 mm) or empty
- Pipe and ring gap closure with insulation layer creator DSX

Installation principle, PYROCOMB® Tubes cable insulation

 Planning aid, PYROCOMB® pipe sleeve

S90 **EI120**

Sleeve with metal housing and fire protection inlays

Fire resistance class	S90	To EI120
Proof of application	General construction approval of DIBt, Berlin	European technical approval of OIB, Vienna

System description, PYROCOMB® pipe insulation

Planning aid, PYROCOMB® pipe sleeve

Two-sided arrangement of the pipe sleeves for wall mounting

Mounting on the underside of the ceiling with metal anchors

Sloping pipe penetration up to an angle of 39°

Pipe sleeves in the area of the penetration

Eccentric arrangement with max. 3 levels of larger pipe sleeves

Pipe post systems with 2 accompanying cables

The pipe sleeves, type TCX of the PYROCOMB® system, can be used as independent pipe sealing for combustible pipes (e.g. sanitary wastewater pipes). Mounting takes place with metal anchors on each side of the wall. Ceiling penetrations only have a tube seal from the underside. Threaded rods are mounted using the push-through method in dry partition walls.

In case of fire, the fire protection material inserted within the seal foams up after a few minutes under high pressure, closing the soft plastic pipes. This safely prevents the spread of fire and smoke, should a fire occur.

The PYROCOMB® pipe sleeves may only be used to insulate plastic pipes in the PYROMIX® and PYROPLATE® Fibre systems.

System benefits

- Many approved pipe materials
- Sloping penetration (up to 39°) possible
- Noise insulation on pipes need not be removed
- Slender pipe sleeve structure
- The size of the pipe sleeve may be three levels greater than the diameter of the run-through pipe
- Versatile application in various systems

Installation principle, PYROCOMB® pipe insulation

System description, PYROMIX® Screed small insulation	64
Installation principle, PYROMIX® Screed small insulation	65
System description, individual cables according to MLAR with insulating layer forming agent	66
Installation principle, individual cables according to MLAR with insulating layer forming agent	67

Mineral wool with melting point $\geq 1,000$ °C to plug the opening

2 cm-deep closure of the surfaces on both sides with the DSX insulation layer creator

Labelling of the small insulation

The PYROMIX® Screed small insulation only consists of two components: OBO's insulation creating material, type DSX, and the MIW mineral wool. The non-combustible mineral wool has a melting point $\geq 1,000$ °C and serves as a basis for the cable insulation. When the opening has been plugged, both sides of the opening are sealed with the DSX insulation creator.

If there is a fire, the filler foams up, preventing penetration by fire and smoke. The foaming action also draws heat from the cables, thus considerably reducing the transfer of heat via the copper cores.

System benefits

- Very simple assembly
- Only two components required
- Low-cost, approved components
- In cartridges or in a bucket
- Components can be used in other systems
- Fulfils the requirements of the MLAR regarding so-called aids

Installation principle, PYROMIX® Screed small insulation

S90

Maximum approved assignment of the opening area with installations: 60%. The data in the named proofs of applicability apply.

DSX insulation layer creator, suitable for full-wall ring gap closure in solid walls and ceilings

With light-duty partitions, filling the double plates to both sides is sufficient

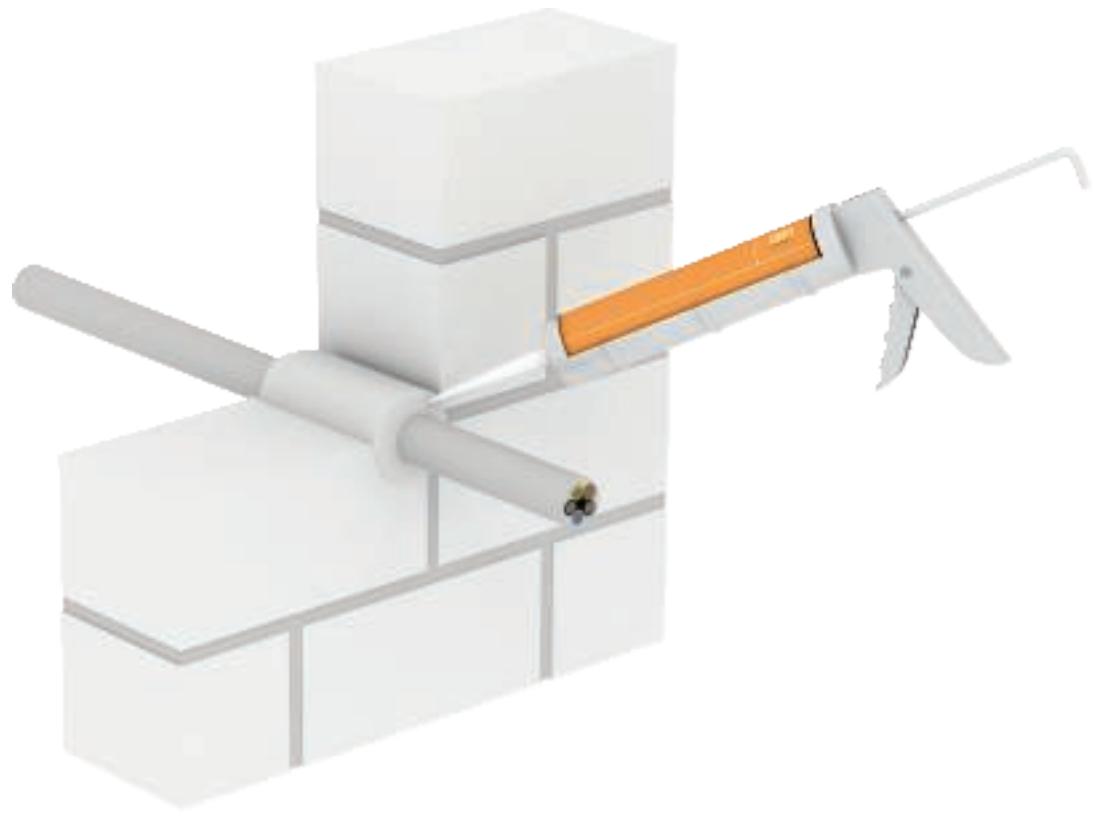

The OBO insulation layer creation material, type DSX, can be used to fill drill holes for penetrations with a single cable or multiple cables of a small cross-section, routed next to each other, through walls and ceilings marking the end of fire sections, in accordance with the cable systems directive.

The ring gap around the cable must be completely closed with fire protection filler. If there is a fire, the filler foams up, preventing penetration by fire and smoke. The foaming action also draws heat from the cables, thus considerably reducing the transfer of heat via the copper cores.

System benefits

- Low-cost, approved material
- Simple handling
- In cartridges or in a bucket
- Components for other systems

Installation principle, individual cables according to MLAR with insulating layer forming agent

Planning aid, materials for small insulation and individual cables acc. to MLAR

Cable tray SKS	78
Mesh cable tray GR-Magic®	82
G mesh cable tray G-GRM	86

System description, Grip M grouped support

Planning aid, escape route installations, false ceiling

Wall and ceiling mounting above suspended fire protection ceiling

Required minimum spacing to the fire protection ceiling

Simple insertion the cables in the opened grouped support

The mechanical stability of the grouped supports in case of fire has been proved for wall and ceiling mounting for fire loads of 90 minutes.

The grouped supports are made of galvanised sheet steel and can be opened and closed easily without the use of tools. To allow simple cable insertion, the grouped supports can remain open during cable routing. The grouped supports are only closed when cable installation is complete. The construction of the grouped support and weight of the installed cables automatically ensures that the lock does not open itself unintentionally.

System benefits

- Tested routing variant
- Proof of minimum spacing to the fire protection ceiling
- Horizontal wall and ceiling mounting
- Can be closed and reopened without tools
- Various dimensions of the grouped supports
- Full assignment with cables possible

Installation principle, Grip M grouped support

Fire-proof fastenings above fire protection ceilings

System description, cable tray RKS-Magic®

Planning aid, escape route installations, false ceiling

Single-layer ceiling mounting above suspended fire protection ceiling

Two-layer ceiling mounting above suspended fire protection ceiling

Required minimum spacing to the fire protection ceiling

Clamp fastening for high load capacities

Screwless joint connection, only the base lugs need to be bent

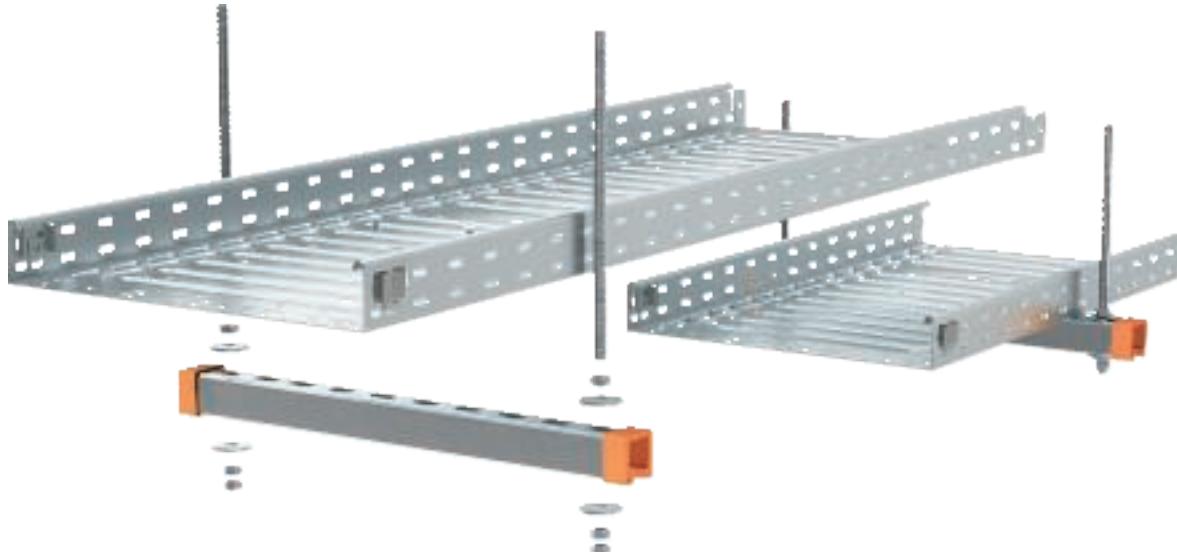

The mechanical stability of the RKS-Magic® cable trays in case of fire has been proved for fire loads of 30 minutes.

The mounting system consists of the MS41 mounting rail with threaded rod suspension from the ceiling on both sides. A two-layer arrangement of the cable trays up to a width of 300 mm is possible, providing that the approved tensile stress in the threaded rods is maintained in case of fire. Due to the varying deformations in case of fire, select the cable trays according to the space available to the false ceiling. These characteristic deformation values of the appropriate cable trays are documented appropriately.

System benefits

- Tested routing system
- Space-saving mounting under the ceiling
- Two-layer mounting up to tray width 300 mm possible
- Proof of minimum spacing to the fire protection ceiling
- Full assignment of cable trays possible
- Various widths of the cable tray

Installation principle, RKS-Magic® cable tray

Planning aid, escape route installations, false ceiling

Fire-proof fastenings above fire protection ceilings

Fire load	30 minutes
Testing proof	BET, Menden

Threaded rod	2078 M12 1m G	2	4
Connection sleeve	12005 M12 G	0	2

Two layers limited to maximum 300 mm width; fastening anchors should be chosen according to the substrate. The appropriate amount of hexagonal nuts and washers are required.

System description, cable tray SKS

Planning aid, escape route installations, false ceiling

Single-layer ceiling suspension

Two-layer ceiling suspension with bracket arrangement on one side

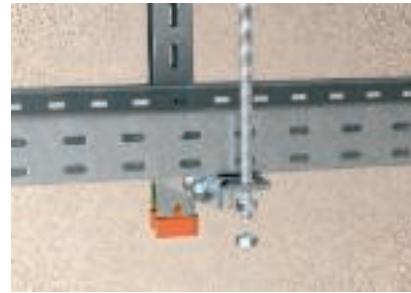

Two-layer ceiling suspension with bracket arrangement on both sides

Wall mounting, one and two-layer possible

Required minimum spacing to the fire protection ceiling

Mounting of the threaded rod lock through the connection bracket on the tip of the bracket

The mechanical stability of the routing system with SKS cable trays in case of fire has been proved for fire loads of 30 minutes. The tested routing system can be mounted on the wall or under the ceiling. To prevent bending of the brackets in case of fire, a threaded rod lock must be mounted at the bracket tip.

Due to the varying deformations in case of fire, select the cable trays according to the space available to the false ceiling. The fire protection survey documents these spacings. When applied logically, the parameters visible there allow the implementation of multi-layer variants.

System benefits

- Tested routing system
- Wall and ceiling mounting
- Two-layer mounting up to tray width 300 mm possible
- Proof of minimum spacing to the fire protection ceiling
- Full assignment of cable trays possible
- Various widths of the cable tray

System description, mesh cable tray GR-Magic®

Planning aid, escape route installations, false ceiling

Single-layer ceiling mounting above suspended fire protection ceiling

Two-layer ceiling mounting above suspended fire protection ceiling

Required minimum spacing to the fire protection ceiling

Clamp fastening for high load capacities

Screwless joint connection

The mechanical stability of the routing system with GR-Magic® mesh cable trays in case of fire has been proved for fire loads of 30 minutes.

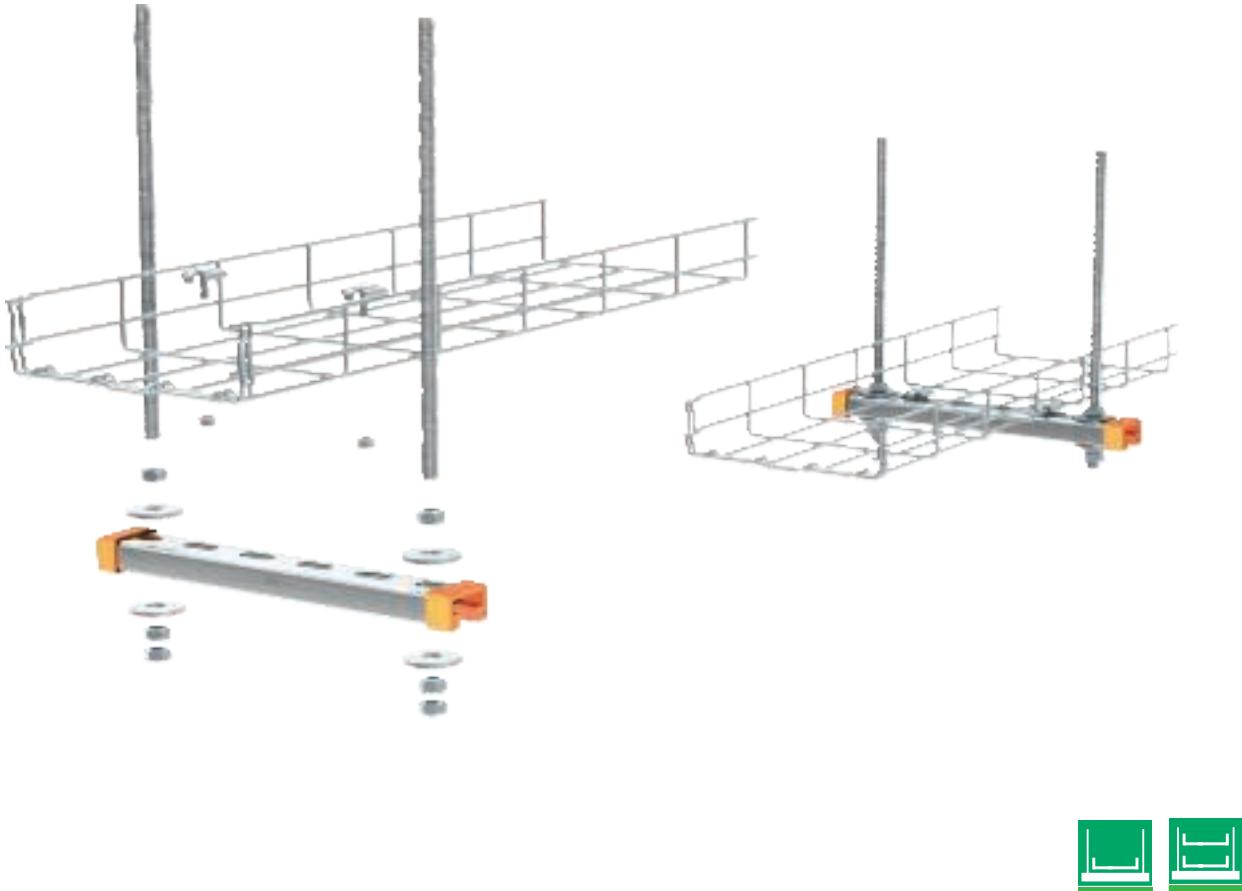

The routing system consists of the mounting rails MS21 and/or MS41 in a pendulum suspension from the ceiling. A two-layer arrangement of the mesh cable trays up to a width of 400 mm is possible, providing that the approved tensile stress in the threaded rods is maintained in case of fire.

Due to the varying deformations in case of fire, select the mesh cable trays according to the space available to the false ceiling. These characteristic deformation values of the appropriate mesh cable trays are documented appropriately.

System benefits

- Tested routing system
- Space-saving mounting under the ceiling
- Two-layer mounting
- Proof of minimum spacing to the fire protection ceiling
- Various widths of the mesh cable tray

Installation principle, GR-Magic® mesh cable tray

Planning aid, escape route installations, false ceiling

Fire-proof fastenings above fire protection ceilings

System description, G mesh cable tray G-GRM

Planning aid, escape route installations, false ceiling

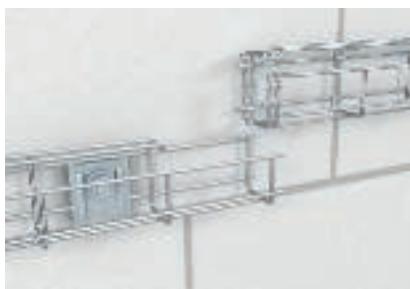

Direct wall and ceiling mounting

Space-saving direct mounting with clamping piece

Required minimum spacing to the fire protection ceiling

Screwless joint connection

Quick and simple insertion of the locking hooks

Securing hook in correct position

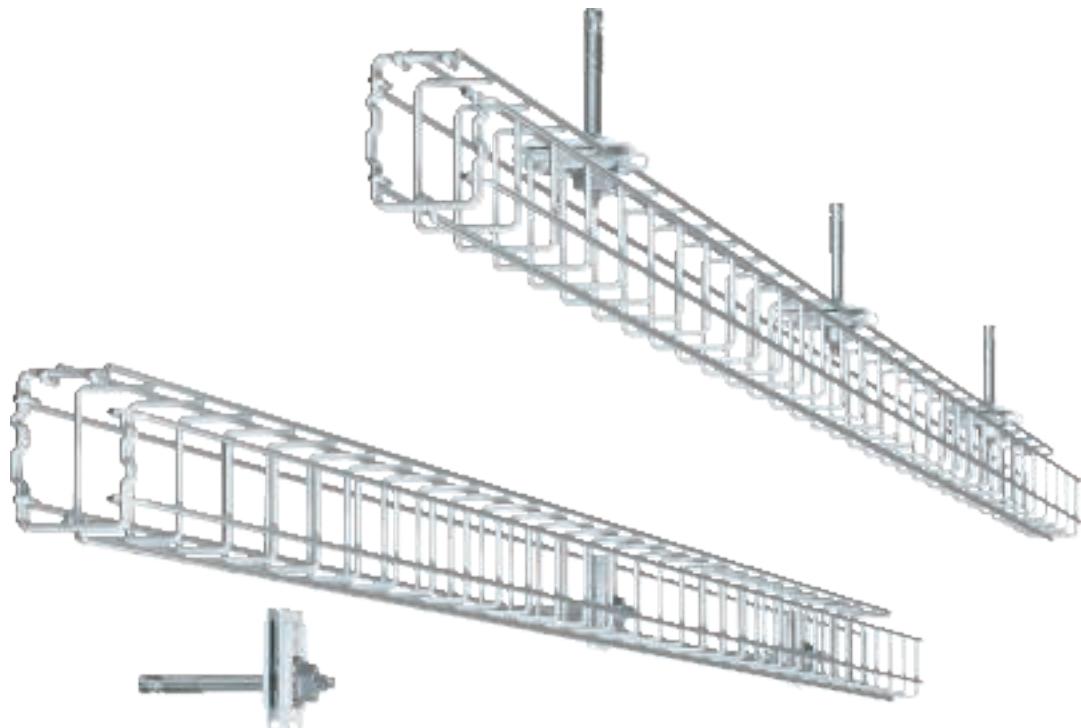

System benefits

- Tested routing system
- Horizontal mounting under the ceiling or on the wall
- Space-saving installation variant through the direct fastening
- Full assignment of the G mesh cable trays possible
- Proof of minimum spacing to the fire protection ceiling
- Various dimensions of the G mesh cable tray

The mechanical stability of the routing system with G-GRM mesh cable trays in case of fire has been proved for fire loads of 30 minutes. The G mesh cable trays can be mounted directly on the wall or under the ceiling. Additional securing hooks must be used to prevent the G mesh cable trays, type G-GRM125 75 and type G-GRM150 100, from opening.

Due to the varying deformations in case of fire, select the G mesh cable trays according to the space available to the false ceiling. These characteristic deformation values of the appropriate G mesh cable trays are documented appropriately.

System description, PYROLINE® Rapid Metal fire protection duct for direct and suspended mounting

Direct wall and ceiling mounting

Mounting on raw concrete in system base

Suspended mounting with vertical bends

Cable outlet with V-TEC glands,
singly or with multiple sealing ring

Retaining clamps as installation
aid to prevent cables from falling
out

Lid mounting without screws
through locking

Planning aid, fire protection ducts

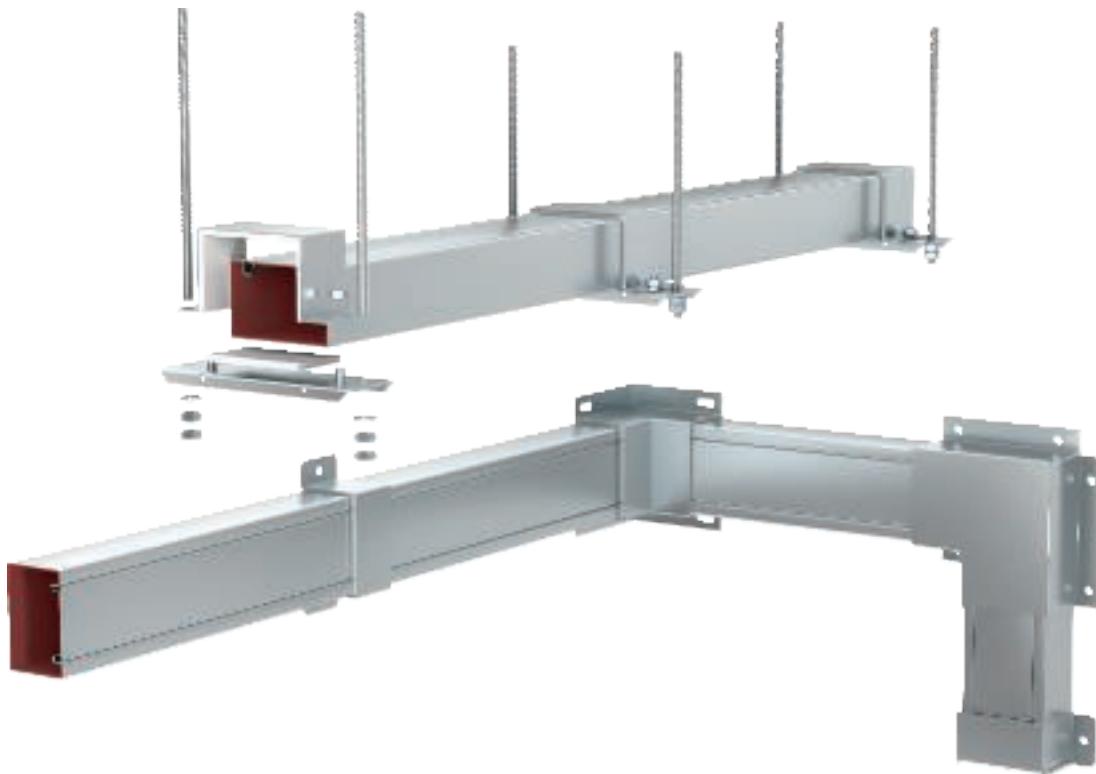

OBO's PYROLINE® Rapid fire protection duct is made from sheet steel with a profiled lid closing contour and an intumescent interior coating. If there is a fire, this provides active fire load encapsulation and safe prevention of the fire spread. This means that the escape and rescue routes remain free from fire and smoke. The PYROLINE® Rapid is tested and approved as an escape route duct for the classes I30 to I120.

The shape matches the standard Rapid 80 cable routing duct and the lids can simply be locked into the base. This also creates the equipotential bonding. The available fittings are mounted with the same connector elements as the section material. The connectors can also be used for suspension. Even overhead mounting is possible, as special brackets keep the cable load away from engaged lids.

System benefits

- Active fire load encapsulation and safe prevention of fire spread
- Protection of escape routes against cable fire
- Shape factor as with Rapid cable routing duct
- Lid equipotential bonding through locking brackets
- No screw ends in the interior - no risk of cable damage
- No metal workshop required, all components prefabricated
- Flat angle, external and internal corner, vertical bend and end piece fittings available
- Direct wall and ceiling mounting, use on raw floor in system base
- Suspended mounting on the connectors or on lock plates of the fittings
- Suspended fastening distance max. 1 m
- Closure of the wall penetration with mineral wool and plaster filler up to I90 application
- Cable outlets with V-TEC glands made of brass or polyamide up to M50
- Multiple assignment of the glands possible with small cables
- Maximum cable load 30 kg/m

Installation principle, PYROLINE® Rapid Metal fire protection duct for direct and suspended mounting

System description, PYROLINE® Con D

Concrete fire protection duct for direct wall and ceiling mounting

Mounted fire protection duct on wall and ceiling as I and E duct

Flexible duct routing through individually creatable fittings

Retaining profile and retaining clamp as mounting aid for cable insertion

Cable fastening for vertical duct mounting with clips

Closing surface treatment through painting or papering

Minor damage can be eliminated at any time

Planning aid, fire protection ducts

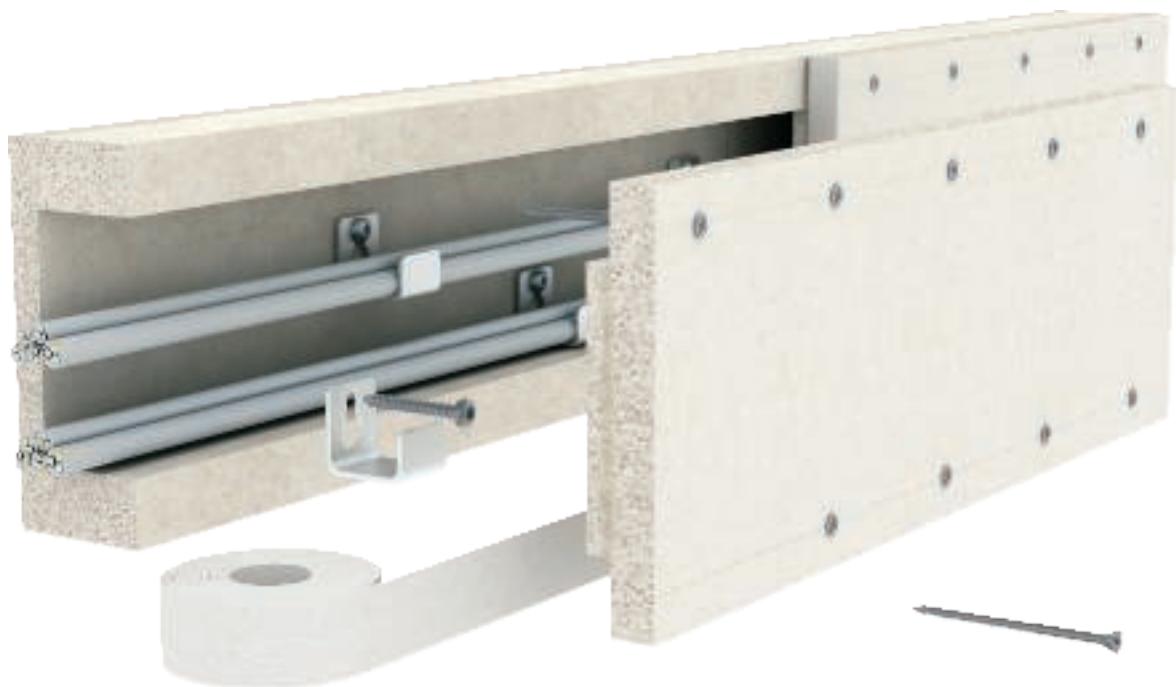

The PYROLINE® Con D fire protection duct consists of fibre-glass light concrete fire protection plates which are resistant to water and frost. The fire protection plates, which are classed as non-combustible (material class A1), have a compacted surface, which is thus hard, smooth and wear-resistant.

The OBO PYROLINE® Con D is used to protect escape and rescue routes against a possible cable fire. This means that the escape and rescue routes remain free from fire, smoke and heat. As an E duct, it allows function maintenance of the safety-relevant circuits. The fire protection duct can be used for direct mounting on walls and under ceilings. Fittings can be created simply and flexibly on site according to the local circumstances.

System benefits

- Protection of escape routes against cable fire
- Protects the cables of safety-relevant systems against a fire from outside
- Cable assignment to max. 22.5 kg/m
- Hard, friction-resistant surface
- Painting and papering over the fire protection duct is permitted
- Flexible on-site creation of fittings
- Various dimensions

System description, PYROLINE® Con S

Concrete fire protection duct for suspended mounting

Suspended ceiling mounting as I duct

Wall mounting as I duct

Mounting as E duct with additional threaded rod locking

Secure joint connection by screwing on the premounted armatures

Loose-fitting lid for quick inspection and retro-assignment

Premounted standard fittings in the section

Planning aid, fire protection ducts

As with the PYROLINE® Con D, the PYROLINE® Con S fire protection duct consists of fibre-glass light concrete fire protection plates which are resistant to water and frost.

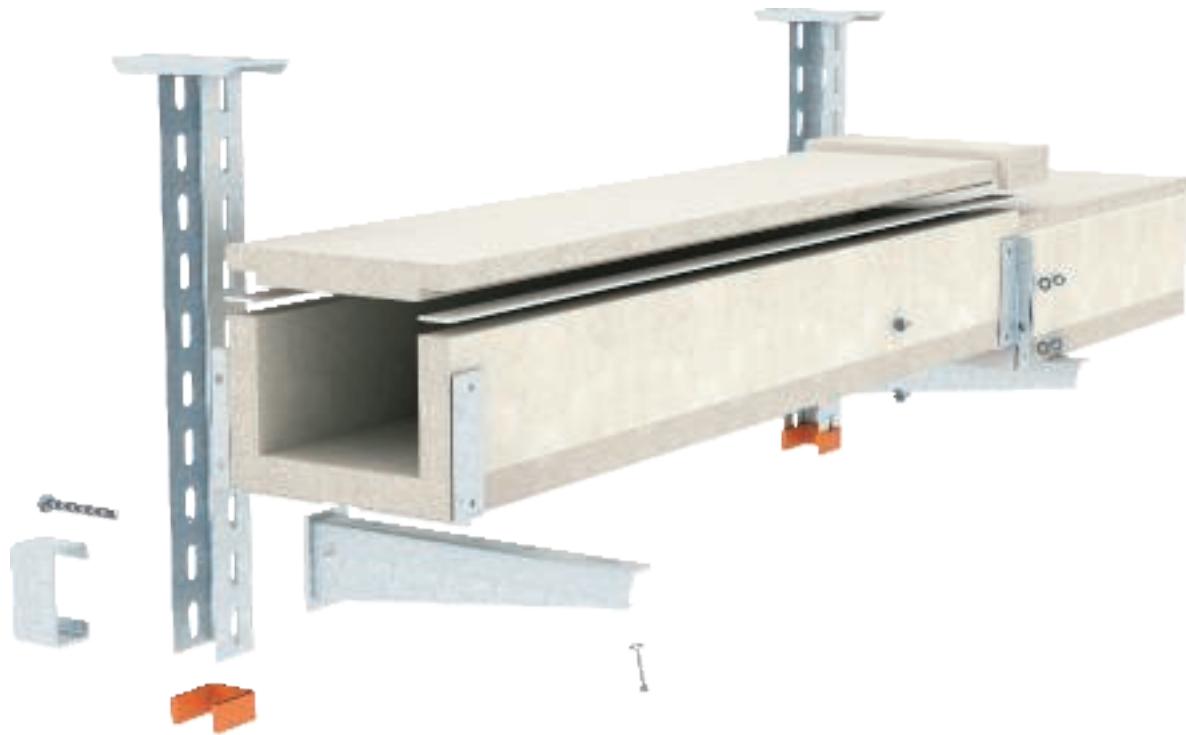

The OBO PYROLINE® Con S is used to protect escape and rescue routes against a possible cable fire. This means that the escape and rescue routes remain free from fire, smoke and heat. As an E duct, it allows function maintenance of the safety-relevant circuits.

The fire protection duct can be installed on wall brackets or on one of the support systems suspended from the ceiling. Mounted connectors permit quick connection of the duct section in situ, whilst loosely placed covers permit quick inspection and reassessment. The duct allows elegant avoidance of objects from other areas such as heating, ventilation and sanitary applications.

System benefits

- Protection of escape routes against cable fire
- Protects the cables of safety-relevant systems against a fire from outside
- Cable assignment to max. 22.5 kg/m
- Hard, friction-resistant surface
- Premounted connection elements
- Fittings for direction changes
- Various dimensions

System description, PYROLINE® Sun PV Concrete photovoltaic duct for direct and suspended mounting

Planning aid, fire protection ducts

Direct wall and ceiling mounting

Flexible duct routing through individually creatable fittings

Can be painted or papered over, to permit discreet integration in the building

Suspended mounting on the connector elements

Contact protection begins directly with the converter

Labelling according to the VDE application rule

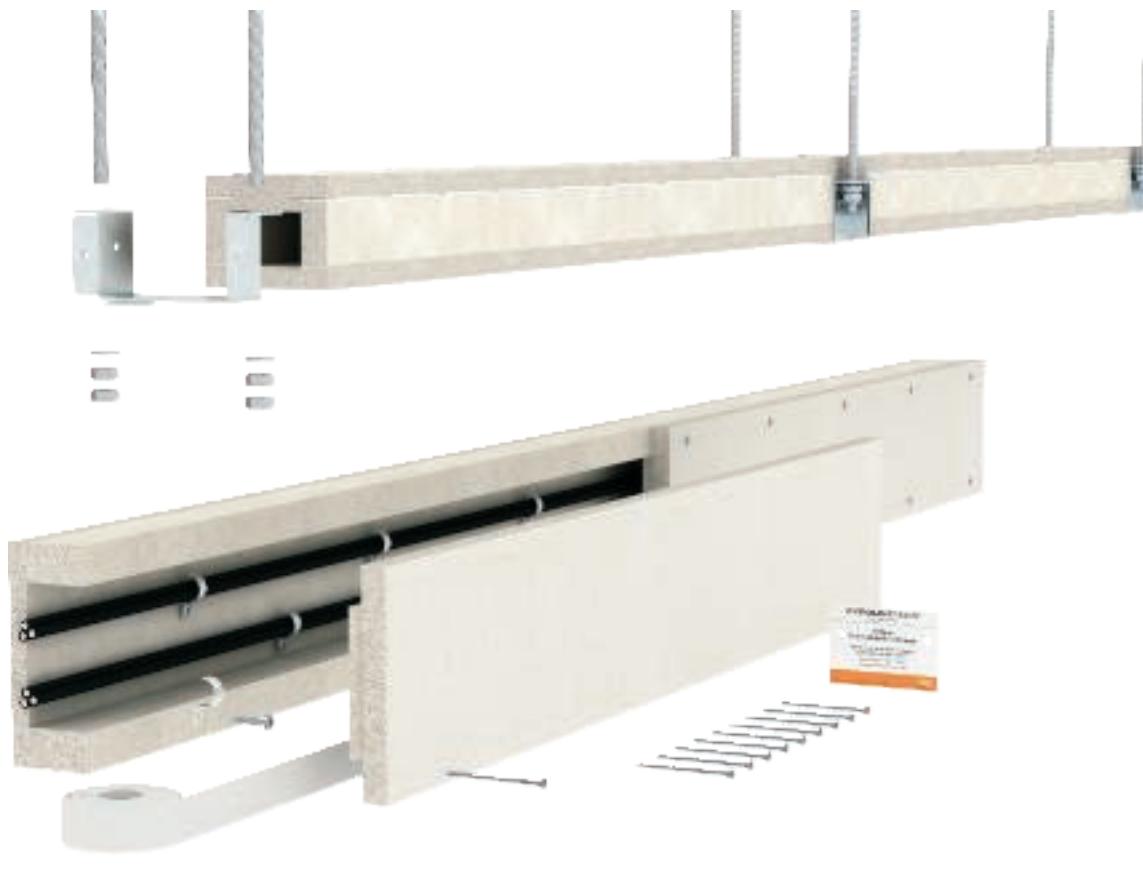

System benefits

- Protection of escape routes against cable fire
- Protects residents and rescue workers against dangerous contact voltages
- Meets the requirements of the VDE application rule AR 7100
- Non-conductive surface
- Connection elements available for suspended variant
- Fittings can be created flexibly
- Very small external dimensions
- Can be used indoors and outdoors
- Can be painted or papered over, to permit discreet integration in the building

The PYROLINE® Sun PV fire protection duct is the ideal fire protection duct for fire-proof routing of photovoltaic DC cables. If there is a fire, its non-conductive surface ensures protection against dangerous contact voltages. In addition, the duct fulfils the requirements as an I duct according to DIN 4102 Part 11 for cable installations in emergency and escape routes.

The fire protection duct can be installed directly on the wall or under the ceiling. The appropriate connection armatures mean that suspended mounting is also possible. The duct is made of water and frost-resistant glass fibre lightweight concrete fire protection plates (non-combustible, material class A1), meaning that it can also be mounted outside the building.

Planning aid, cable bandages

System description, FSB-BS cable bandage	100
Installation principle, cable bandage FSB-BS	101
System description, FSB-WB cable bandage	102
Installation principle, cable bandage FSB-WB	103

System description, FSB-BS cable bandage

Application in interior areas

Complete encasement of the suspended cable run

Complete encasement of a cable run as wall mounting

Bandage fastening with metallic rails in a single-clip installation

Bandage fastening with metallic tightening straps in a rail installation

Cable exit with bandaging

Planning aid, cable bandages

The FSB-BS cable bandage is the ideal solution to prevent fire spread through large cable bundles or cable support systems within the fire sections. The mesh possesses a fire protection coating, which stops a fire in its tracks at an early stage, e.g. in the case of a short-circuit. If there is fire coming in from the outside, the material is not involved in the course of the fire, effectively preventing the spread of the fire, both in vertical and horizontal directions.

Before mounting FSB-BC cable bandages in emergency and escape routes in existing buildings, obtain the approval of the construction authorities. However, in many cases, this presents the only economic solution compared to fire protection ceilings or panelling with plate materials.

System benefits

- Application approval of DIBt
- For horizontal and vertical cable installations
- Prevention of fire spread through foaming fire protection material
- Visually clear distinction between inner and outer sides
- PU-coated mesh - can be wet-wiped
- Large application area

Installation principle, cable bandage FSB-BS Application in interior areas

Planning aid, cable bandages

Cable jacketing to prevent fire spread

Proof of application	Application approval of DIBt Berlin Material approval of DIBt Berlin
Document no.	Z-56.217-3550 Z-19.11-1892
Prevention of fire spread	min. 90 minutes
Material properties	Exterior grey, interior white Materials class DIN 4102-2: B1 – hardly flammable
Max. fastening spacing	0.5 m
Cable types and cross-sections	No restriction

Caution!

Use in emergency and escape routes requires the approval of the construction supervision.

System description, FSB-WB cable bandage Application in industrial areas / outdoors

Use of the bandage in aggressive environments, e.g. offshore

Bandaged rising section in the tower of a wind power plant

Use on support systems in supply rooms or production halls

Cable tunnel with bandages in power stations

Bandaged cable support systems in areas with many combustible materials

Use for photovoltaic cables run over a fire wall

The FSB-WB bandage is made of weatherproof materials for applications in areas with special ambient conditions. The bandage has construction approval from the DIBt as a highly flame resistant material according to DIN EN 13501-1.

The foaming of the fire protection coating in case of fire safely prevents the spread of a fire via the cables. This can include applications such as cable routing above fire walls on the roof of a building. There is a fire protection survey available especially for this application.

System benefits

- Weatherproof
- Resistant to various chemicals and oils
- Material approval according to DIN EN 13501-1
- For horizontal and vertical cable installations
- Prevention of fire spread through foaming fire protection material
- Visually clear distinction between inner and outer sides
- Large application area

Installation principle, cable bandage FSB-WB Application in industrial areas / outdoors

System description, cable tray RKS-Magic®

Planning aid, function maintenance: cable-specific support structures

One to five-layer ceiling mounting

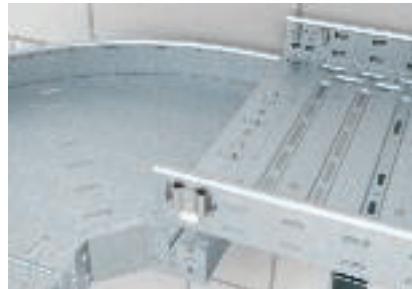

Ceiling suspension with one-sided arrangement of up to 4 brackets

Wall mounting

Connected joint connector, only the base shackles need to be bent

Quick and simple fitting mounting with screwless Magic connection

Separating retainer mounting with truss-head bolts

System benefits

- Tested according to DIN 4102, Part 12
- Function maintenance classes E30 and E90
- Multi-layer ceiling mounting (bracket mounting on one and both sides)
- No threaded rod lock required
- Screwless joint connection
- Cable load up to 30 kg/m permitted
- Separating retainer and lid mounting permitted
- Installation of fittings in section permitted

The RKS-Magic® cable tray has been tested as a cable-specific support construction for electrical function maintenance according to DIN 4102 Part 12 and approved for function maintenance classes E30 to E90.

Threaded rod locking is not required at the tip of the bracket. This saves not just material but also considerably simplifies and speeds up the installation of cables. The screwless connection system allows interconnection of the RKS-Magic® cable trays without tools and in a particularly quick and economic manner.

To ensure function maintenance, only the locking lugs in the base need to be bent after the trays have been connected. The double material thickness in the joint area and the beading in the base mean that the cable tray has a very high load capacity.

Installation principle, RKS-Magic® cable tray

E30 E90

Planning aid, function maintenance: cable-specific support structures

System description

Routing type	Cable-specific support construction
Test certificate no.	P-MPA-E-08-008

System description, cable tray RKS-Magic® VA On suspension clamp AHB-T

Single-layer ceiling mounting with suspension clamp

Mounting under sloping ceiling with individually adapted suspension clamp

Two-layer ceiling mounting with suspension clamp and intermediate clamp

Two-layer ceiling mounting with suspension clamp and extension

Fastening of the cable tray with truss-head bolts

Joint connection without additional gland

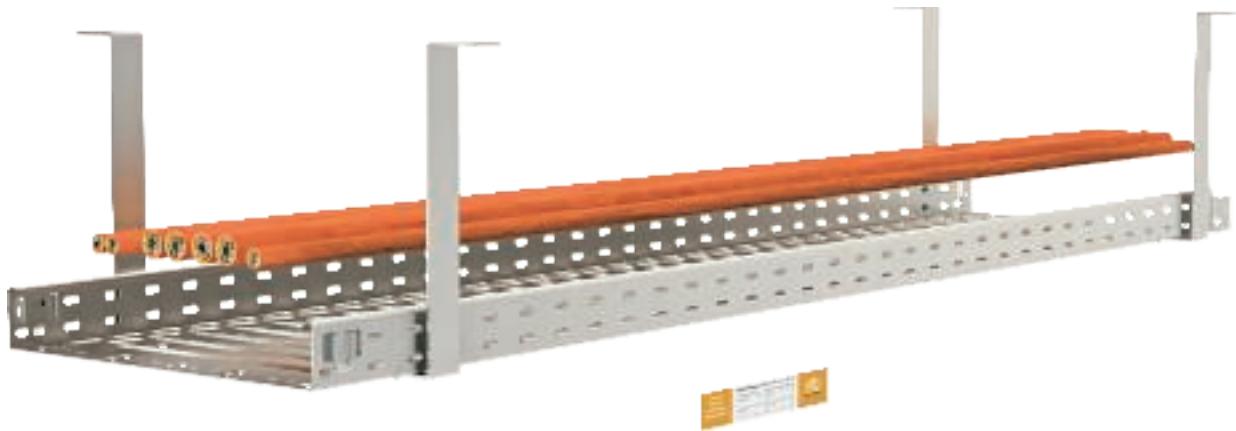

The RKS-Magic® cable tray, made of rustproof steel with the AHB-T suspension clamp, has been tested as a cable-specific support construction for electrical function maintenance according to DIN 4102 Part 12 and approved for function maintenance classes E30 to E90. The rustproof steel version permits mounting in areas with more aggressive atmospheres, e.g. in road tunnels.

The shape of the suspension clamp, together with the permitted version variants, permits simple, space-saving installation of the cable tray under the ceiling. The benefits of the screwless connection systems of the RKS-Magic® cable trays also apply to this routing type. This makes mounting of RKS-Magic® cable trays, for example in the installation of long sections in increased corrosion protection requirements, an economically viable routing variant.

System benefits

- Tested according to DIN 4102, Part 12
- Function maintenance classes E30 and E90
- Routing variant made of rust-proof steel, e.g. for road tunnels
- One and two-layer ceiling mounting
- Suspension clamp approved in various versions
- Screwless joint connection thus ideal for long sections
- Maximum approved cable load 30 kg/m
- Separating retainer and lid mounting permitted
- Installation of fittings in section permitted

System description, mesh cable tray GR-Magic®

Planning aid, function maintenance: cable-specific support structures

Ceiling mounting with brackets mounted on one side

Ceiling mounting with brackets arranged on both sides

Multi-layer wall mounting

Screwless joint connection

Screwless mesh cable tray fastening on the bracket

Screwless fastening of the connection component to the side wires

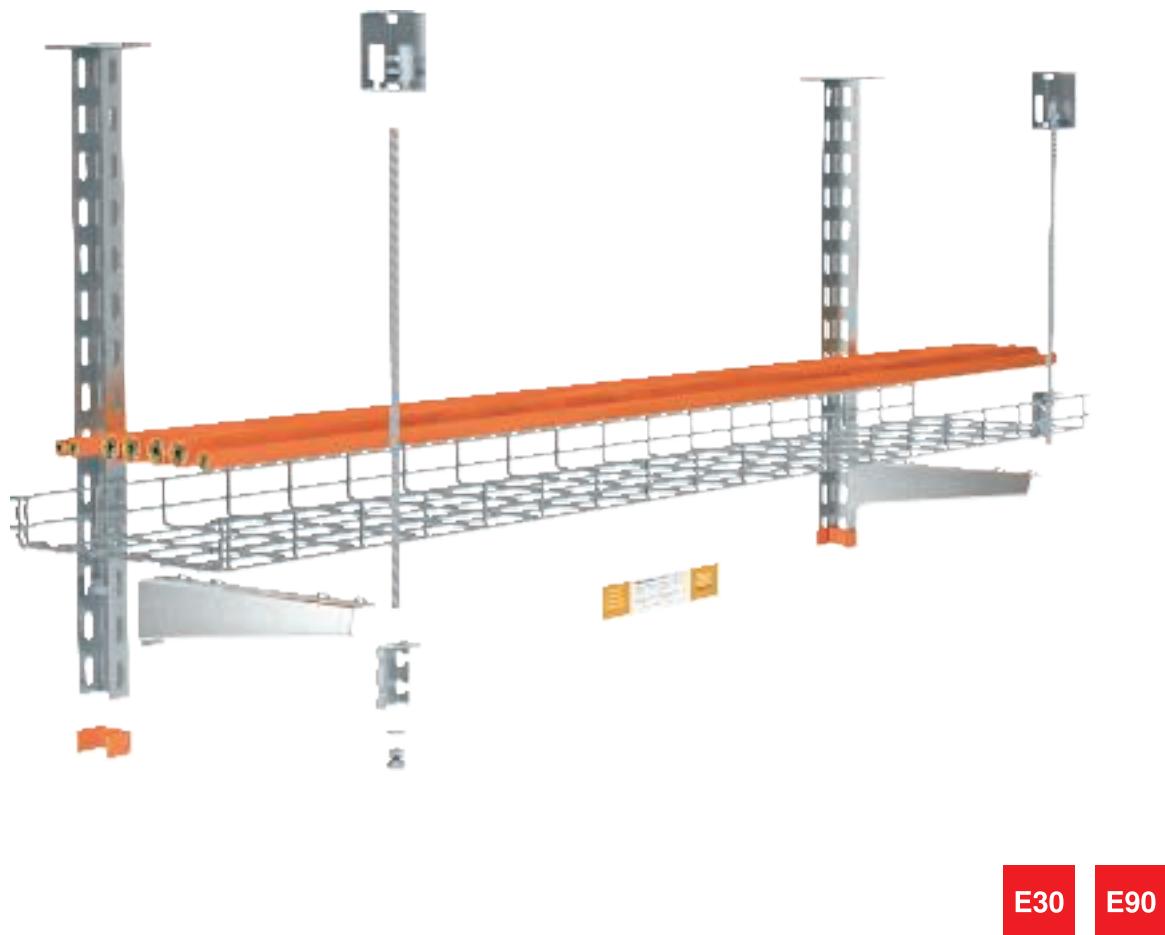

System benefits

- Tested according to DIN 4102, Part 12
- Function maintenance classes E30 and E90
- Multi-layer wall and ceiling mounting
- Screwless mesh cable tray mounting on the bracket
- Screwless mounting of the connection component for the threaded rod lock
- Screwless joint connection
- Maximum approved cable load 15 kg/m

The GR-Magic® mesh cable tray has been tested as a cable-specific support construction for electrical function maintenance according to DIN 4102 Part 12 and approved for function maintenance classes E30 to E90.

The threaded rod lock is mounted directly on the tray rail, using the ABG connection component. This is just attached to the side lengthwise wires of the mesh cable tray. Mounting the threaded rod secures the component against unintentional release. The screwless connection system of the GR-Magic® mesh cable trays ensures toolless, and thus particularly rapid and economic, mounting.

Planning aid, function maintenance: cable-specific support structures

System description, cable ladder SL

Planning aid, function maintenance: cable-specific support structures

Ceiling mounting with bracket arrangement on one side

Ceiling mounting with bracket arrangement on both sides

Wall mounting with vertical threaded rod locking

Bracket mounting with spacer and hexagonal bolt

Connection component at a spacing of max. 100 mm next to the bracket

Threaded rod mounting for multi-layer route arrangement

System benefits

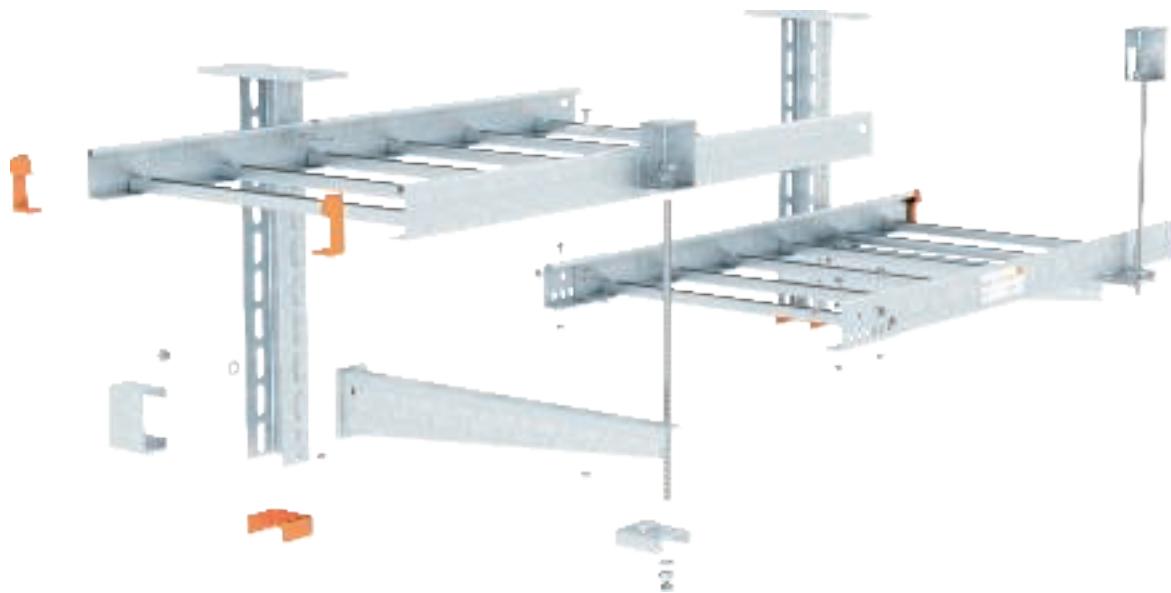

- Tested according to DIN 4102, Part 12
- Function maintenance classes E30 and E90
- Multi-layer wall and ceiling mounting (bracket mounting on one and both sides)
- Span: max. 1.5 m
- Cable load: max. 20 kg/m
- Width of the cable ladders: max. 500 mm

The cable-specific routing variant with type SL cable ladders and U suspended supports fulfills the requirements of DIN 4102 Part 12 for function maintenance classes E30 and E90. This routing variant permits mounting parameters which extend beyond the maximum values of the standard support structures with cable ladders.

The threaded rod lock is mounted directly beside the bracket on the ladder rail, using the ABL connection component. This is simply attached to the underbelt of the ladder rail, with no need to screw it on. When the threaded rod has been mounted, the connection component is secured against unintentional release.

The position of the joints between the brackets can be chosen freely. The external connectors used are placed over the rails of the cable ladders and screwed on appropriately.

Installation principle, SL cable ladder

Planning aid, function maintenance: standard support structures

The routing type "Cable trays, type SKS, on U suspended supports under the ceiling" fulfills all the requirements of DIN 4102 Part 12 as a standard support structure for function maintenance classes E30 to E90.

The cable trays can be mounted on the U suspended support on one or both sides with up to 6 layers. The threaded rod lock is fastened with a maximum spacing of 100 mm beside the bracket. For this, the ABR connection component should be screwed under the tray base.

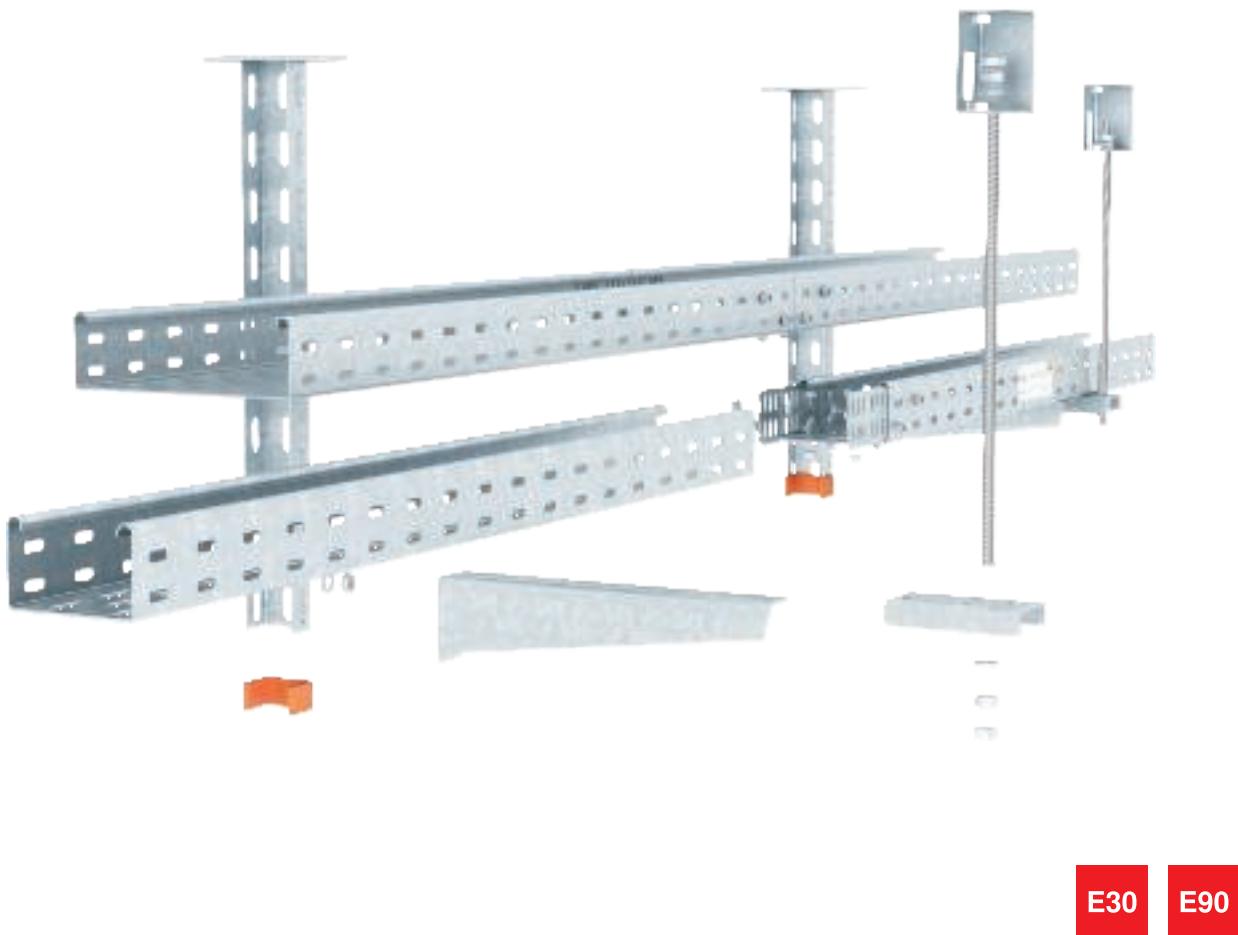

The position of the joints between the individual support points can be chosen freely. The cable trays are screwed on using connectors in the side rail and an additional joint plate in the base.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- Multi-layer section mounting (on one or both sides)
- Mounting of two cable trays permitted on one bracket
- Lightweight components
- Mounting of the bracket on the suspended support without spacer
- Free joint positioning
- Threaded rod mounting under the ceiling with fire protection clamp or internal thread anchor

Installation principle, SKS cable tray with U suspension support

System description

Routing type	Standard support system
Surveyor's comments no.	3038/625/11-2 - CM
Function maintenance classes	E30 to E90
Testing standard	DIN 4102 Part 12
Mounting variant	Ceiling mounting with U suspended support and threaded rod lock

Planning aid, function maintenance: standard support structures

Approved data

Span, max.	1.2 m
Max. number of layers	3 (6 for 1 tray per bracket)
Cable weight per layer	10 kg/m
Cable tray width, max.	300 mm
Max. cable trays per bracket	2
Max. total width	500 mm

The data of the surveyor's comments, together with a valid, general construction test certificate of a materials testing institute for the cable type to be used, apply.

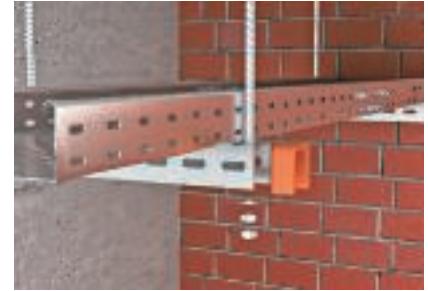

System description, cable tray SKS, with U transverse profile

Single-layer ceiling suspension

Two-layer ceiling suspension

Threaded rod mounting with hexagonal nuts and large washers

The routing type "Cable trays, type SKS, on U transverse profiles under the ceiling" fulfills all the requirements of DIN 4102 Part 12 as a standard support structure for function maintenance classes E30 to E90.

This routing variant is a particularly space-saving routing type: the construction height of the transverse profile is just 30 mm. Versions with one or two-layer mounting variants are approved. The position of the joints between the individual support points can be chosen freely. Connectors are screwed into the side rails and an additional joint plate to the base, in order to interconnect the cable trays.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- One and two-layer section mounting permitted
- Low construction height of the U transverse profile
- Space-saving ceiling fastening
- Free joint positioning

Installation principle, SKS cable tray with U transverse profile

E30 E90

System description

Routing type	Standard support system

Planning aid, function maintenance: standard support structures

Approved data

Span, max.	1.2 m
Max. number of layers	1
Cable weight per layer	10 kg/m
Cable tray width, max.	300 mm
Max. cable trays per bracket	2
Max. total width	400 mm

The data of the surveyor's comments, together with a valid, general construction test certificate of a materials testing institute for the cable type to be used, apply.

System description, cable tray SKS, wall mounting

Wall mounting, multi-layer, with vertical threaded rod locking

Wall mounting with diagonal threaded rod locking

Ceiling fastening of the threaded rods with internal thread clamps

Mounting of the brackets and the connection components on the wall

Fastening of the sloping connection component

Planning aid, function maintenance: standard support structures

The routing type "Cable trays, type SKS, with wall brackets on the wall" fulfills all the requirements of DIN 4102 Part 12 as a standard support structure for the function maintenance classes E30 to E90.

When the cable trays are mounted on the wall, up to three layers can be arranged vertically. The threaded rod lock is fastened vertically under the ceiling with a maximum spacing of 100 mm beside the bracket using an ABR connection component screwed on beneath the tray base. In the case of one-layer section mounting, the threaded rod lock can alternatively be created using sloping connection components at an angle of 45° to the wall.

Joints can be positioned freely between the individual support points. Connectors are screwed into the side rails and an additional joint plate to the base, in order to connect the cable trays.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- Multi-layer section mounting with vertical threaded rod locking
- Single-layer section mounting with sloping threaded rod locking
- Light-duty bracket
- Free joint positioning

Installation principle, SKS cable tray, wall mounting

System description, cable ladder LG-VS/F, with U suspended support

Ceiling suspension with bracket arrangement on one side

Ceiling suspension with bracket arrangement on both sides

Mounting under sloping ceiling with variable head plate

Mounting of the straight connectors using truss-head bolts

Attachment of the connection component on the underbelt of the ladder rail

Attachment of the threaded rod in the fire protection clamp

Planning aid, function maintenance: standard support structures

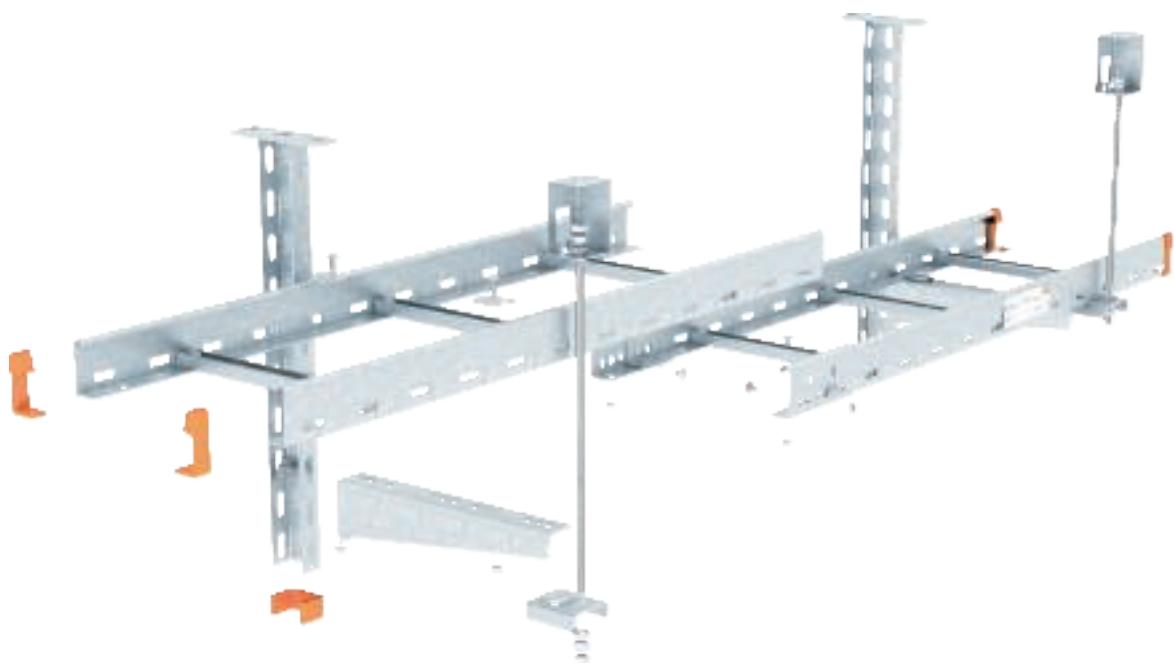

The routing type "Cable ladders, type LG, with U suspended supports under the ceiling" fulfills all the requirements of DIN 4102 Part 12 as a standard support structure.

The cable ladders can be mounted on the U suspended support on one or both sides with up to 3 layers. The threaded rod lock is fastened with a maximum spacing of 100 mm beside the bracket. The ABL connection component need simply be attached to the underbelt of the ladder rail. Mounting of the threaded rod secures the connection component against slipping. The rung spacing in the cable ladder is 150 mm. Therefore, no additional run support plates are required. The position of the joints between the individual support points can be chosen freely.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- Multi-layer section mounting (on one or both sides)
- Lightweight components
- Mounting of the bracket on the suspended support without spacer
- Screwless mounting of the connection component to the ladder rail
- No additional run support plates required
- Free joint positioning
- Threaded rod mounting under the ceiling with fire protection clamp or internal thread anchor

Installation principle, LG-VS/F cable ladder with U suspended support

E30 E90

System description

Routing type	Standard support system
Surveyor's comments no.	3917/4635-1-Mu
Function maintenance classes	E30 to E90
Testing standard	DIN 4102 Part 12
Mounting variant	Ceiling mounting with U suspended support and threaded rod lock

Planning aid, function maintenance: standard support structures

Approved data

Span, max.	1.2 m
Max. number of layers	3

Cable ladder width, max.	400 mm

The data of the surveyor's comments, together with a valid, general construction test certificate of a materials testing institute for the cable type to be used, apply.

System description, cable ladder LG-VS/F, with U transverse profile

Single-layer ceiling suspension

Two-layer ceiling suspension

Threaded rod mounting with hexagonal nuts and large washers

Mounting on transverse profile with clamping piece, truss-head bolts and large washers

Planning aid, function maintenance: standard support structures

The routing type "Cable ladders, type LG, with U cross-sections mounted under the ceiling" fulfils all the requirements of DIN 4102 Part 12 as a standard support structure for function maintenance classes E30 to E90.

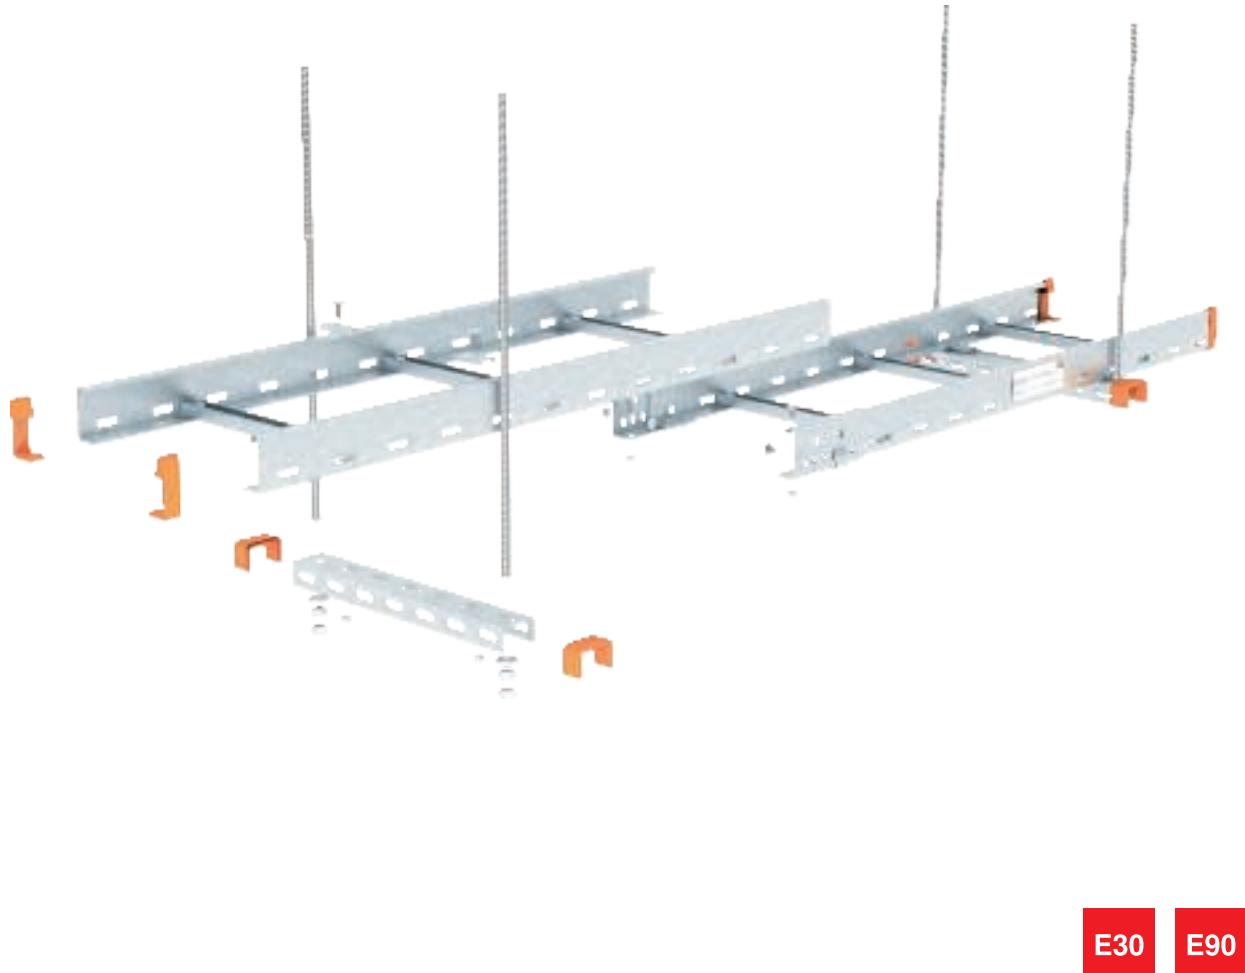

The threaded rod suspension from the ceiling on both sides and the low construction height of the cross-section, just 30 mm, means that this routing type saves a lot of space. Versions with one or two-layer mounting variants are approved. The rung distance of just 150 mm means that there is no necessity for additional mounting of rung support plates.

The joints of the ladder rails are connected using external connectors, which are screwed to the rails. The position of the joints between the cross-sections can be chosen freely.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- One and two-layer section mounting permitted
- Low construction height of the U transverse profile
- Space-saving ceiling fastening
- Free joint positioning
- No additional run support plates required

Light-duty vertical ladder	142
Heavy-duty vertical ladder	144
Industrial vertical ladder	146
Strain relief ZSE90	148

System description, light-duty vertical ladders

Direct mounting of the vertical ladder on solid walls

Joint connection with screwed-on connector

Joint design without connector

Fastening of the cables, either individually or as a bundle with clamp clips

Effective support measure with ZSE90 strain relief

Planning aid, function maintenance: vertical ladders

Vertical ladders of type LG fulfil all the requirements of DIN 4102 Part 12 as a standard support structure.

The vertical ladders are fastened directly to the wall through the underbelt ladder rails at a spacing of maximum 1.2 m. Alternatively, fastening can also take place from outside with additional fastening brackets on the rail of the vertical ladder. Mounting of screwed-on connectors is approved and they can be positioned freely. The rung distance is 30 cm and the cables are fastened using clamp clips, type 2056 M (clamp clips with metal pressure trough). Mounting of the strain relief ZSE90 is approved for storey heights of more than 3.5 m. The vertical ladder need not be interrupted as the strain relief is mounted via the continuous vertical ladder.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- Light-duty version of the vertical ladder in the widths 200 mm to 400 mm
- Mounting directly on the wall
- Cable bundling (max. 3 cables) possible
- Continuous vertical ladder when mounting the strain relief ZSE90

Installation principle, light-duty vertical ladders

E30 E90

System description

Routing type	Standard support system
Surveyor's comments no.	3917/4635-4-Mu
Function maintenance classes	E30 to E90
Testing standard	DIN 4102 Part 12

Approved data

Max. fastening distance	1.2 m
Cable weight, max.	20 kg/m
Rung distance max.	0.3 m
Rising section width, max.	400 mm
Max. individual cable diameter	Unlimited
Cable bundle max.	3 x Ø 25 mm

The data of the surveyor's comments, together with a valid, general construction test certificate of a materials testing institute for the cable type to be used, apply.

System description, heavy-duty vertical ladders

Direct mounting of the rising section on solid walls

Joint design with screwed-on connector

Installation of the cables with clamp clips, also possible in the case of multiple assignment

Effective support measure with ZSE90 strain relief

Planning aid, function maintenance: vertical ladders

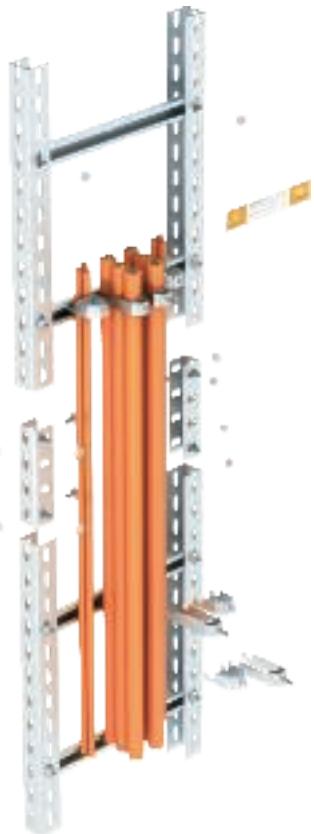

Vertical ladders of type SLM fulfil all the requirements of DIN 4102 Part 12 as a standard support structure. The vertical ladders are fastened directly to the wall through the ladder rails at a spacing of maximum 1.2 m. Individual lengths may be screwed on with connectors. They can be positioned freely. Cables must be fastened on each rung with clamp clips of type 2056 UM with a metal pressure trough, at a spacing of 30 cm. There is no limit to the diameter of installed individual cables with clamp clips. Bundling of up to three cables is possible with this standard support structure. Mounting of the strain relief ZSE90 is approved for storey heights of more than 3.5 m. The vertical ladder need not be interrupted as the strain relief is mounted via the continuous vertical ladder.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- Heavy-duty version of the vertical ladder in the widths 400 mm to 600 mm
- Mounting directly on the wall through the ladder rail
- Cable bundling (max. 3 cables) possible
- Continuous vertical ladder when mounting the strain relief ZSE90

Installation principle, heavy-duty vertical ladders

System description, industrial vertical ladders

Direct mounting of the vertical ladder on solid walls

Mounting with screwed-on fastening brackets

Cable installation with clamp clips on the rungs of the vertical ladder

Effective support measure with ZSE90 strain relief

Planning aid, function maintenance: vertical ladders

Industrial vertical ladders, type SLS, fulfil all the requirements of DIN 4102 Part 12 as a standard support structure.

The vertical ladders are fastened at a spacing of maximum 1.2 m using fastening brackets, which are screwed to the ladder rails. When mounting rungs, maintain a spacing of maximum 30 cm. The cables must be fastened on each rung with clamp clips of type 2056 UM with a riveted metal pressure sleeve. There is no limit on the external diameter of individual cables. Up to 3 cables can be bundled together under a clamp clip. For storey heights of more than 3.5 m, the strain relief ZSE90 may be mounted over the vertical ladder. The vertical ladder need not be interrupted for it.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- Heavy-duty industrial version of the vertical ladder in the widths 400 mm to 600 mm
- Mounting with fastening bracket on the wall
- Cable bundling (max. 3 cables) possible
- Continuous vertical ladder when mounting the strain relief ZSE90

Installation principle, industrial vertical ladders

System description, strain relief ZSE90

Mounting of the strain relief in combination with single clip routing

Mounting of the strain relief in combination with cable routing on profile rails

Mounting of the strain relief in combination with vertical ladders

Fastening points next to the cables directly on the wall

Fastening with threaded rods and slide nuts in the rungs

Mineral wool filling for flexible cable assignment

Planning aid, function maintenance: vertical ladders

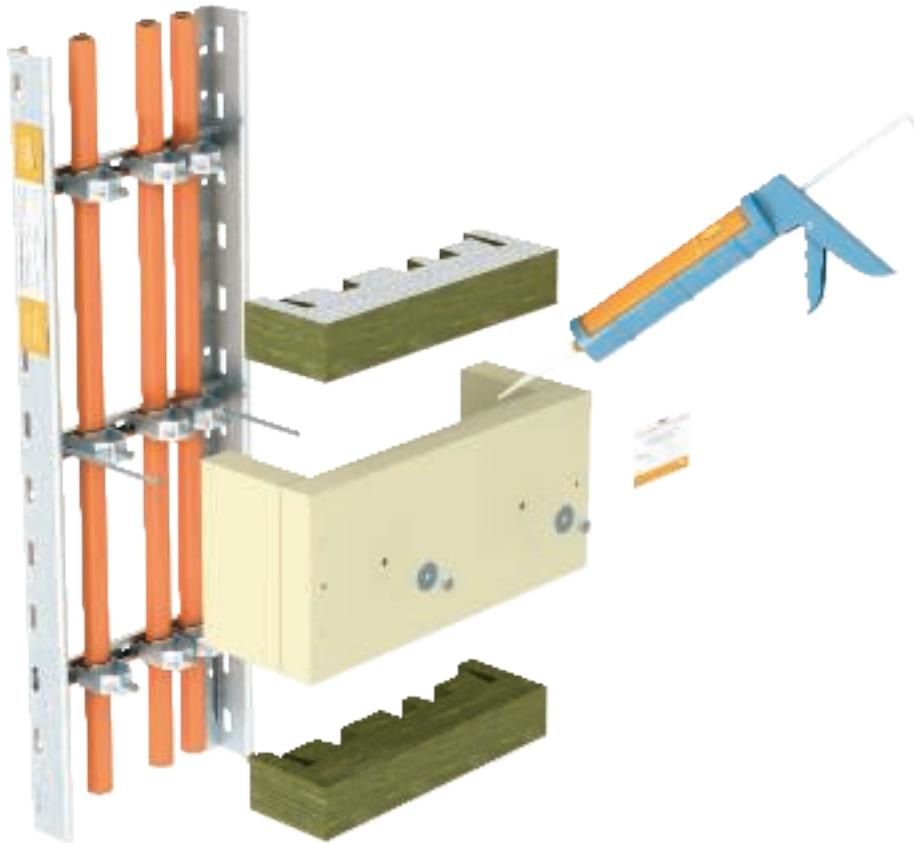

In the case of continuous, vertical routing of function maintenance cables according to DIN 4102 Part 12, the standard requires effective cable support at a maximum spacing of 3.5 m. The OBO strain relief ZSE90 allows fulfilment of this requirement. The ZSE 90 is approved for all function maintenance classes E30 to E90 in combination with standard support structures. It can be used for all rising section widths and also for vertical single-clip installations.

The ZSE90 strain relief covers the fastening point of the cables on profile rails, rungs or with single clips. In case of fire, it prevents direct fire loads on the clips, meaning that they stay "relatively" cold. The weight of the cable is dissipated safely. There is no risk of the cables tearing through their intrinsic weight if there is a fire. This guarantees sure function maintenance.

System benefits

- Standard support structure to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cables
- For vertical ladders with widths up to 600 mm
- 8 different sizes
- Vertical ladders need not be interrupted
- Side fastening on the wall possible next to the installed cables
- Using slide nuts, fastening possible to profile rails or the rungs of the vertical ladders

Installation principle, strain relief ZSE90

E30 E90

System description, Grip M grouped support

Horizontal wall and ceiling mounting

Mounting of the grouped support 2031 M 15 with long trough

Easy insertion the cables in the opened grouped support.

Planning aid, function maintenance: individual routing, pipes and metal duct

Cable routing with metal grouped supports is approved as a cable-specific routing type for the function maintenance classes E30 to E90 according to DIN 4102 Part 12.

The grouped supports used are made of sheet steel and can be opened and closed easily without the use of tools. To allow simple cable insertion, the supports can remain open during cable routing. Grouped supports for wall and ceiling mounting are suitable.

Depending on the tested cables and the grouped supports used for the tests, fastening spacings of maximum 0.8 m and a cable assignment of up to 6 kg/m are permitted. The instructions of the various cable manufacturers should be complied with.

System benefits

- Tested according to DIN 4102, Part 12
- Function maintenance classes E30 and E90
- Wall and ceiling mounting permitted
- 3 different sizes
- High cable load with simultaneous large fastening spacing
- Can be closed and opened without tools
- Can remain open during cable installation

Installation principle, Grip M grouped support

The data in the general construction test certificates of a materials testing institute for the appropriate cable type apply.

System description, metal pressure clip

Space-saving cable routing directly under the ceiling

Simple cable installation through side insertion of the cables

Planning aid, function maintenance: individual routing, pipes and metal duct

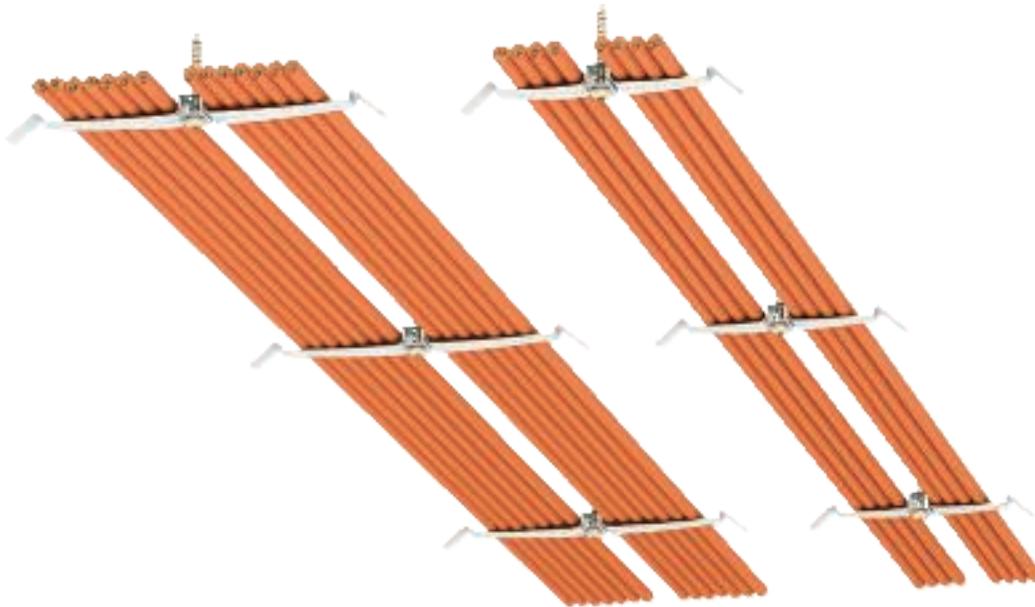

Cable routing with rust-proof steel pressure clips is approved as a cable-specific routing type for function maintenance class E30 according to DIN 4102 Part 12.

This routing variant is particularly suitable when there is only little mounting height available under the ceiling. With just small additions, fire signal cables and also power cables for safety lighting systems can be routed in a space-saving way. For this, the hips of the pressure clips are simply bent downwards and the cables pushed in from the side.

System benefits

- Tested according to DIN 4102, Part 12
- Function maintenance class E30
- Ceiling mounting permitted
- 2 different sizes
- Very easy cable insertion
- Small space requirements through low mounting height
- Terminal area can be expanded with spacer

Installation principle, metal pressure clip

2033M	0.5 m	2 x 9
2034M	0.5 m	2 x 7

The data in the general construction test certificates of a materials testing institute for the appropriate cable type apply.

System description, clamp clips with profile rails

Horizontal mounting with clamp clips and long troughs on the wall and under the ceiling

Horizontal cable mounting with clamp clips on the wall

Horizontal cable mounting with clamp clips under the ceiling

Vertical cable mounting with clamp clips on the wall

Installation of the cables, either individually or as a bundle

Effective support measure with ZSE90 strain relief

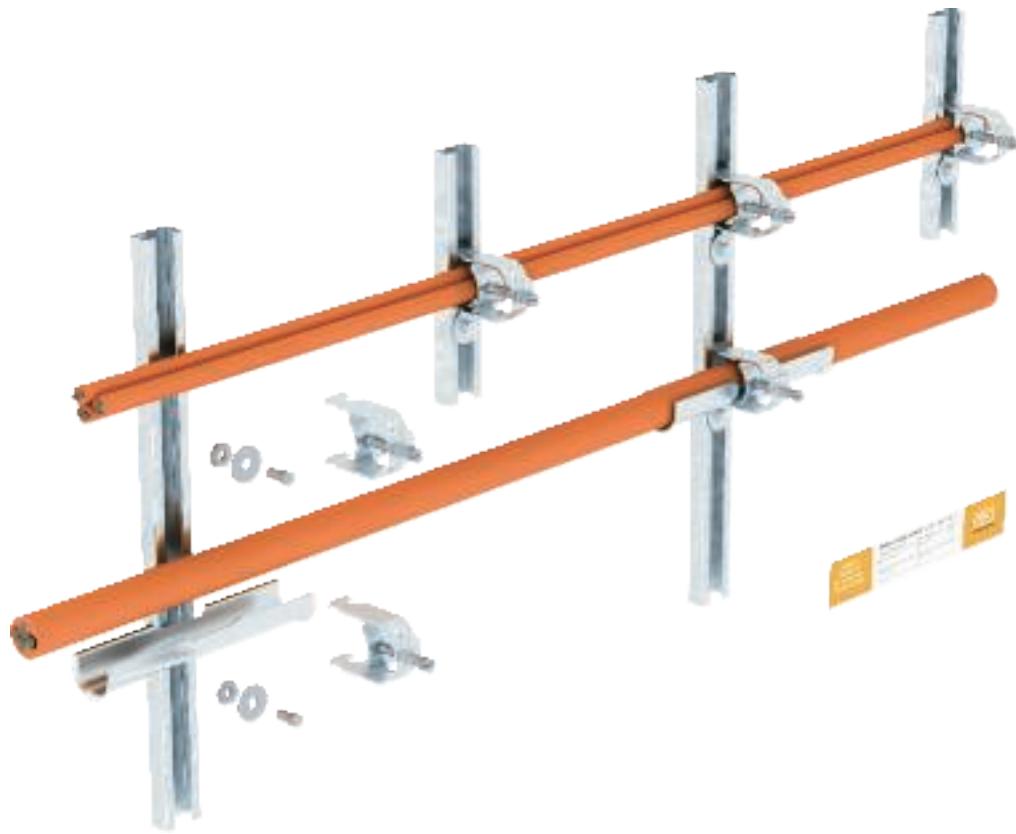

The routing types with clamp clips fulfil all the requirements of DIN 4102 Part 12 as a standard support structure. In addition, mounting as a cable-specific routing type is possible, depending on the specifications of the cable manufacturer.

The clamp clips are made of sheet steel with a riveted metal pressure trough. Long troughs made of galvanised sheet steel can be used to increase the support area for the cables. These are inserted loosely between the cables and the metal pressure troughs of the clamp clips. Bundling of up to three cables in a clamp clip is possible. The individual diameter of the bundled cables may not exceed 25 mm. If only individual cables are installed, then there is no limit to the cable diameter.

System benefits

- Tested according to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Free choice of cable when used as standard support structure
- Large choice of cables when used as cable-specific support structure
- Horizontal mounting under the ceiling and on the wall
- Vertical cable routing on the wall
- Cable bundling (max. 3 cables) possible as standard support structure
- Mounting approved in combination with the strain relief ZSE90

Installation principle, clamp clips with profile rails

System description, screw-in spacer clips

Horizontal cable mounting on the wall

Mounting under the ceiling

Vertical cable installation as individual and bundle routing on the wall

Bundled cable routing under the ceiling

Effective support measure with ZSE90 strain relief

Planning aid, function maintenance: individual routing, pipes and metal duct

The routing types with individual clips fulfil all the requirements of DIN 4102 Part 12 as a standard support structure for the function maintenance classes E30 to E90. In addition, mounting of the individual clips as a cable-specific routing type is possible, depending on the specifications of the cable manufacturer.

The closed screw-in spacer clips are made of galvanised sheet steel. Mounting is carried out either by pushing through the slots of the clips or by screwing onto a fire protection anchor with threaded tip M6. Bundling of up to three cables together in a single clamp clip is possible for mounting as a standard support structure. The individual diameter of the bundled cables may not exceed 25 mm. There is no limit to the diameter of installed individual cables with screw-in spacer clips.

System benefits

- Tested according to DIN 4102, Part 12
- Function maintenance classes E30 and E90
- Free choice of cable when used as standard support structure
- Large choice of cables when used as cable-specific support structure
- Horizontal mounting under the ceiling and on the wall
- Vertical cable routing on the wall
- Cable bundling (max. 3 cables) possible as standard support structure
- Mounting approved in combination with the strain relief ZSE90

System description, cable routing in pipes

Ceiling mounting with screw-in spacer clip and clamp clip

Horizontal wall mounting with screw-in spacer clip and clamp clip

Space-saving installation of multiple pipes next to one another with clamp clips

Insertion into the screw-in spacer clip by hooking the cover under the screw

Multiple assignment according to the data of the test reports

Planning aid, function maintenance: individual routing, pipes and metal duct

Cable routing in the pipe, in combination with clamp clips or with screw-in spacer clips, fulfills the requirements of DIN 4102 Part 12 as a cable-specific routing type for the function maintenance classes E30 to E90.

Sheet steel clamp clips are used together with a riveted metal pressure sleeve and the appropriate profile rails, or closed screw-in spacer clips made of galvanised sheet steel. Refer to the available test certificates of the cable manufacturer for the maximum possible dimensions of the pipes, the maximum fastening spacing of the clips and the number of cables to be run in the pipe.

System benefits

- Cable-specific support construction to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Additional mechanical protection of the installed cables
- Cables can be installed at a different time to the pipe
- Horizontal mounting under the ceiling and on the wall
- Cable assignment possible with individual cables or multiple cables

Installation principle, cable routing in pipes

E30 E90

Fire-proof fastenings above fire protection ceilings

System description, cable routing duct LKM

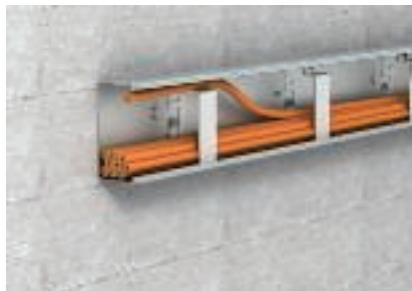

Horizontal wall and ceiling mounting

Routing of power, data or fire alarm cables in the duct, type LKM60100

Tidy routing of data and fire alarm cables in the duct, type 20030

Retaining clamps locked into the base as installation aid for wall mounting

Retaining clamps as mounting aid for the insertion of cables for ceiling mounting

Closing of the duct by simple locking of the lid onto the duct base

Planning aid, function maintenance: individual routing, pipes and metal duct

Cable routing with metal cable routing ducts, type LKM, is approved as a cable-specific routing type for the function maintenance classes E30 to E90 according to DIN 4102 Part 12.

The ducts offer additional mechanical protection of the installed cables. This mounting variant permits sure fulfilment of existing requirements of specifications or of building use. This installation variant is also used if, for reasons of appearance, open routing of the cables with function maintenance is not wanted.

A retaining clamp is available as an installation aid for the duct type LKM60100. This prevents cables from falling out in the case of wall and ceiling mounting. When cable installation has been completed, the duct lid is locked onto the duct base.

System benefits

- Cable-specific routing variant to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- Horizontal wall and ceiling mounting permitted
- 2 different sizes
- LKM20030 duct tested for fire and telecommunications cables
- LKM60100 duct tested for power cables and for fire and telecommunications cables
- Retaining clamp as installation aid
- Lid can be mounted without tools

Installation principle, LKM cable routing duct

Planning aid, function maintenance: junction boxes

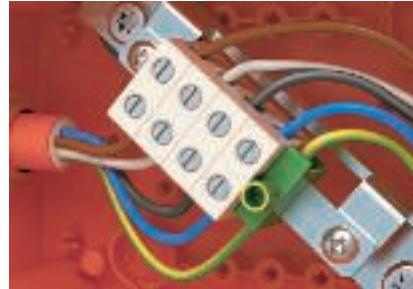

System description, FireBox junction box	166
Installation principle, FireBox junction box	167

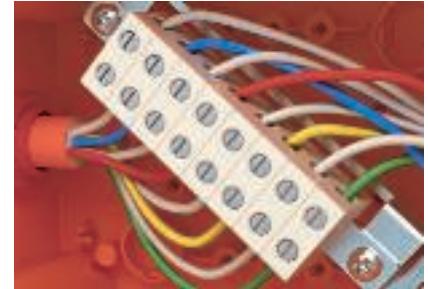

System description, FireBox junction box

Fully installed FireBox with identification plate

Version with 4 terminals and protective conductor terminal for power cables

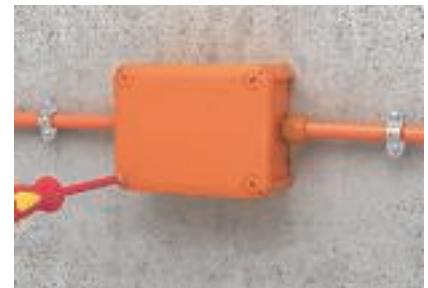

Version with 8 terminals for data and fire alarm cables

Cable entry with V-TEC cable glands

Mounting with fire protection bolt tie through the clamp and base of the FireBox

Quick lid mounting through 90° rotation of the corner screws

The T series of the FireBoxes possesses all the benefits of normal cable junction boxes and are made of a thermoplastic polymer. These include the resistance to breakages, resistance to knocks and the high IP protection rating. There is also the freely selectable positioning of the cable entries with V-TEC cable glands. The FireBox is tested and approved as a connection socket for electrical function maintenance to DIN 4102 Part 12 with the classes E30 to E90.

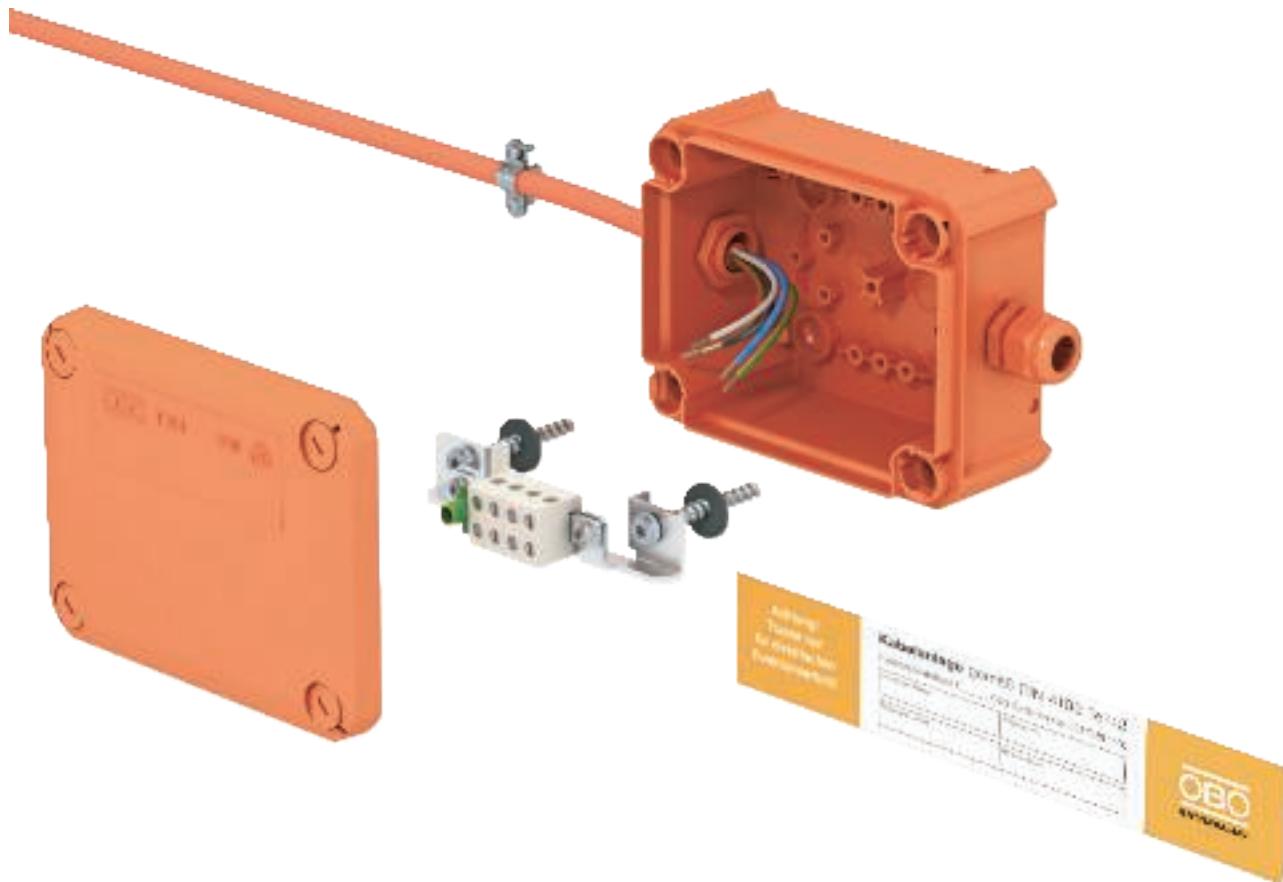

The high temperature-resistant terminals to connect the individual cable wires are premounted to form a connection unit. The protective conductor terminal is connected to the support clamp, meaning that covers of the metal parts are not required.

System benefits

- Cable-specific routing variant to DIN 4102 Part 12
- Function maintenance classes E30 and E90
- VDE-tested
- Wall and ceiling mounting permitted
- Box made of elastic, yet impact-resistant, thermoplastic
- 2 different sizes with 4 different connection units
- Tested for power cables of up to 16 mm²
- Tested for fire and telecommunications cables with 0.8 mm wire diameter
- Complete scope of delivery with equipped connection unit and fire protection bolt ties
- Cable entry with freely-positionable V-TEC cable glands
- Quick lid fastening through 90° rotation of the corner screws

Installation principle, FireBox junction box

System description, metal spreading anchor

Bolt tie, type FAZ II

Nail tie, type FNA II, with flat head

Nail tie, type FNA II, with thread end

Internal thread anchor, type FZEA II

Cavity ceiling tie, type FHY

OBO Bettermann's fire protection anchors for mounting in concrete components were tested for fire protection. Appropriate proofs are available for the tests carried out.

Depending on the fire resistance length (up to 120 minutes), a maximum load capacity was determined when anchored in concrete. This load data are contained in the appropriate European technical approvals and appropriate test documentation. Although, during a fire, the load capacity of the anchors is below the load capacity when cold, it is completely sufficient for fireproof fastening of the various components of the different routing types.

Planning aid, anchoring

System benefits

- Anchor tested and approved for fire
- Determined load capacity according to fire resistance period
- Fastening option in concrete components
- Fastening option in false ceilings
- Various dimensions for the different routing components and applications

System description, injection tie

Mounting in hollow brick

Mounting with plastic wire sleeves
permitted

Mounting with centring sleeve and
anchor rod in porous concrete

The FIS V injection mortar system is particularly suitable for fire-protection fastening in hollow brick, cavity concrete blocks or even in porous concrete. The non-spreading connection is created through the use of the mortar with plastic wire sleeves and a threaded anchor rods. The components are tested and approved for a fire-resistance period of 90 minutes, rising to 120 minutes in porous concrete.

The maximum load capacity depending on the fire resistance period and the fastening substrate. These maximum load capacities are stated in the appropriate test documentation. Although, during a fire, the load capacity of the anchors is below the load capacity when cold, this load capacity is completely sufficient for fireproof fastening of the various components of the different routing types.

System benefits

- Injection tie tested and approved for fire
- Determined load capacity according to fire resistance period
- Use in hollow brick, cavity concrete blocks or even in porous concrete
- Various dimensions for the different routing components and applications
- Proven fastening with plastic wire sleeves

System description, bolt tie

Version with truss head and T drive

Version with large truss head and T drive

Version with hexagonal head

Version as shaft tie with M6 threaded tip

Version with countersunk cone head and T drive

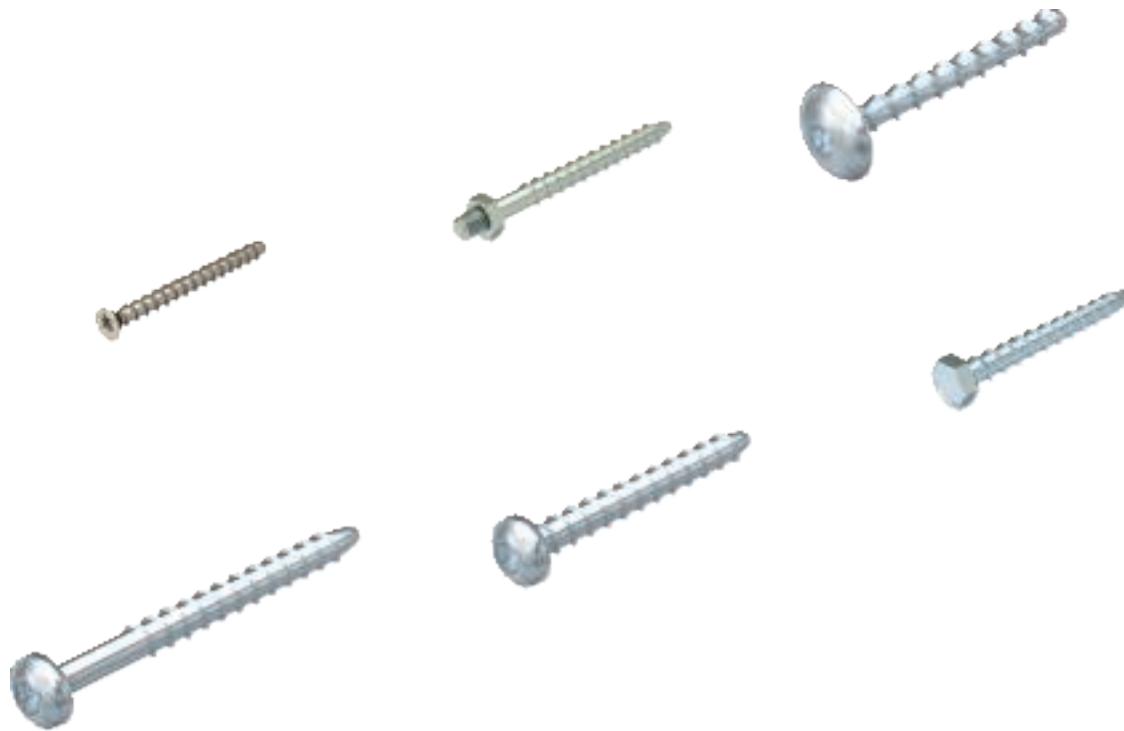

OBO Bettermann's fire protection bolt ties, type MMS, were fire-tested in a manner similar to DIN 4102. The maximum load capacity, depending on fire resistance periods of up to 120 minutes, was determined for different types of solid masonry. These values are documented in the appropriate test certificates.

Taking the occurring loads for the function maintenance application and for false ceiling mounting into account, the determined load capacities for the different masonry types are absolutely sufficient. The fire protection bolt ties are screwed directly into the drill hole. There is no need for an additional anchor. No spreading forces develop and mounting near masonry edges is not required.

System benefits

- Bolt tie tested and approved for fire
- Determined load capacity according to fire resistance period
- Fastening option in solid masonry types
- Various dimensions and head shapes for the different routing components

Installation principle, bolt tie

Fire protection duct PYROLINE® Rapid - BSKM 0711

Metal fire protection duct, I30 to I120

Type	Height	Width	Length	Pack.	Weight	Item No.
	mm	mm	mm	m	kg/100 m	
BSKM 0711	70	110	2,000	2	387.000	7216 30 0

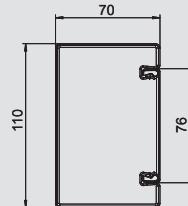

St Steel FS Strip-galvanised /m

Sheet steel duct with intumescent interior coating

In case of fire, actively prevents the spread of fire in the duct and protects emergency and escape routes against the impacts of a cable fire. The cover and base are securely interconnected using the self-contacting patented locking brackets. This also creates the equipotential bonding. Fire resistance classes I30 to I120 according to DIN 4102 Part 11.

Mounting options: directly on the wall or under the ceiling, beneath system floors on the raw floor, or suspended on support systems or using connector elements (support spacing, max. 1 m).

Scope of delivery: cover and base as complete unit
Coloured versions available on request in various RAL shades.

Connector

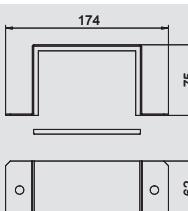

Type	Pack.	Weight	Item No.
	pcs	kg/100 pcs	
BSKM-VD 0711	1	37.600	7216 31 2

St Steel FS Strip-galvanised /pc.

Clamp with integrated seal for BSKM 0711,

for connection and smoke-proof sealing of duct joints.

Usable at min. 30 mm side distance of the duct to the ceiling or wall.

Connector for corner mounting

St Steel

FS Strip-galvanised

/pc.

Rung support plates to increase the support area for the cables in the fittings for routing types with cable ladders for function maintenance to DIN 4102 Part 12. Use the support plates to ensure the largest possible support surface in the cable ladder fittings for the function maintenance cables in case of fire. The rung support plates are just laid loosely on the rungs of the cable ladder fittings. The lugs pointing down prevent slippage.

Connection component

Type	Pack. pcs	Weight kg/100 pcs.	Item No.
ABL FT	20	15.000	6221 46 7

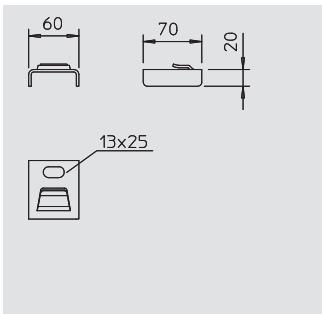

St Steel

FT Hot-dip galvanised

/pc.

The connection component is the connection between the threaded rod lock and the suspension system for the routing types with cable ladders for function maintenance to DIN 4102 Part 12.

It is attached to the under-belt of the ladder rail at a distance of max. 100 mm from the bracket. When the threaded rod has been mounted, the connection component is secured against slipping.

SAB40 FS	380	25	65.000	6222 97 8

St Steel FS Strip-galvanised /pc.

Rung support plates to increase the support area for the cables in the fittings for routing types with cable ladders for function maintenance to DIN 4102 Part 12. Use the support plates to ensure the largest possible support surface in the cable ladder fittings for the function maintenance cables in case of fire. The rung support plates are just laid loosely on the rungs of the cable ladder fittings. The lugs pointing down prevent slippage.

Connection component

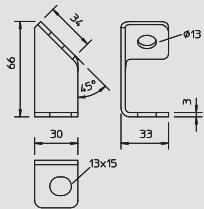

Type	Pack.	Weight kg/100 pcs.	Item No.
ABL FT	20	15.000	6221 46 7

St Steel FT Hot-dip galvanised /pc.

The connection component is the connection between the threaded rod lock and the suspension system for the routing types with cable ladders for function maintenance to DIN 4102 Part 12.

It is attached to the under-belt of the ladder rail at a distance of max. 100 mm from the bracket. When the threaded rod has been mounted, the connection component is secured against slipping.

Connection component, sloping

Type	Pack.	Weight kg/100 pcs.	Item No.
ABS FS	20	7.500	6365 02 7

St Steel FS Strip-galvanised /pc.

The connection component is the connecting element for the sloping arrangement of the threaded rod locking for wall mounting of the standard routing types with cable ladders and cable trays for function maintenance to DIN 4102 Part 12.

Vertical ladder, LG 60 VS, 286
Vertical ladder, SLM50, 286
Vertical ladder, SLS80, 286
V-Tec brass cable outlet, 226

W

Wall and support bracket AW 15, 237, 260, 280
Wall and support bracket AW 30, 260, 280
Wall and support bracket AW 30 F, 280
Wall and support bracket AW 30F, 215
Wall and support bracket AW 55, 260
Wall and support bracket AWG 15, 260
Wall and support bracket MWA 12, 279
Wall connection collar I90 for internal height 105 mm, 228, 235
Wall connection collar I90 for internal height 50 mm, 228, 234
Wall connection I120, 222, 225
Washer, 179, 185, 203, 217, 238, 241, 262, 305
Washer 966, 282
Washer for slip protection, 294

Terms and conditions of sale and delivery
of OBO BETTERMANN GmbH & Co. KG, OBO BETTERMANN Projekt und Systemtechnik GmbH
and OBO Befestigungselemente GmbH, Menden.

1. All our supplies and services shall be governed exclusively by the following terms and conditions, including our additional terms and conditions for cable tray business transactions. Any terms and conditions of business and purchasing of the customer shall be valid only if we have acknowledged them in writing. Our quotations are without engagement; they are mere invitations to submit contract offers. Any and all transactions and agreements, including those entered into by our employees and agents shall only be binding upon our written confirmation or invoicing. The foregoing provision shall also apply to any modifications of the agreed formal requirements.

2. The documents and data pertaining to the quotation, such as illustrations, brochures, drawings, dimensions, loading capacity values and weight details are approximate only, unless they are expressly stipulated to be binding.

Samples are non-binding samples for inspection. Any purchase according to sample will be subject to customary deviations and deviations resulting from normal production processes. The properties of the sample shall be no guaranteed quality of the purchase object unless expressly stated otherwise in the confirmation of order. Samples must be returned to us at the latest within four weeks in perfect condition. If they are not returned within this period in proper condition, we shall be entitled to charge the purchase price for the sample in accordance with our current price list. All information on our products, in particular the illustrations, drawings, weight, dimension and performance data included in our quotations and printed matter shall be regarded as approximate average values and shall not represent any quality guarantee.

With regard to products made according to customer drawings, samples and other instructions of the customer, we will not provide any warranty nor assume any liability for the due and proper functioning of the product or for any other defects if and to the extent they are based upon the customer's specifications. The customer shall indemnify us from any third party claims, including claims for product liability as may be asserted against us for damages resulting from the products unless we have caused such damages by intent or gross negligence. The customer shall warrant that the manufacture and supply of products made in accordance with his instructions will not infringe any proprietary rights of third parties. Should any proprietary rights be asserted against us, we shall be entitled, without any legal review of the third party claims, to withdraw from the contract after hearing the customer, unless the third party withdraws the claims asserted against us under its proprietary rights within eight days by written declaration. The customer shall compensate us for any damage sustained as a result of the assertion of proprietary rights. In case of withdrawal, the work we have carried out so far shall be remunerated. Further rights under the statutory provisions shall not be affected thereby.

Any moulds, tools and design data produced by us for the execution of the order shall be our exclusive property. Unless expressly agreed otherwise, the customer shall not have any claims thereto, even if he has contributed to the costs of producing such moulds, tools and design data.

3. The packing, shipping route and means of transportation shall be left to our discretion in the absence of any other agreements. They shall be charged at their cost price. We will take back undamaged cases, when being returned carriage paid, at 2/3 of the amount invoiced. The one-way or pool pallets used for transport shall be either exchanged upon taking delivery or returned. The smallest packing units stocked and listed may not be broken up for rationalisation reasons. In case of orders for different quantities, the nearest packing unit will be supplied.

We reserve the right to deviate from the agreed delivery quantity, in particular in the case of custom-made products, to a customary extent or in conformity with national or international standards. In case of a demand for adhering to a precise quantity, an express reference is necessary and subject to confirmation.

Master and call orders shall oblige the customer to accept the total quantity on which the master/call order is based. Where no particular call orders are specified in the contract, the total quantity of the master call order must be called within twelve months. If the customer fails to adhere to call deadlines, we shall be entitled to deliver and charge the total quantity in full after four weeks from written notice with reference to the consequences of any failure to call. Our rights arising from any default of the customer shall not be affected thereby.

4. Unless otherwise agreed, our prices are quoted ex works and do not include packing and insurance. The value added tax at the rate applicable on the date of dispatch will be added to our prices. The purchaser shall ensure the correctness of his VAT identification number, which he must notify to us immediately without being asked. He shall undertake to inform both us and the competent domestic tax authority without delay of any change in his name, address and VAT identification number.

Delivery shall be franco domicile within Germany, i.e. carriage and packing prepaid, if the net order value is in excess of € 1,200. For small orders below € 100 (net excluding value added tax), we shall invoice a lower quantity surcharge of € 10 (net) per order. Upon transfer of our supplies and services to a carrier or forwarding agent, at the latest upon their leaving our warehouse or supply plant, the risk shall pass to the recipient, even in case of deliveries free place of destination.

5. Delivery periods and delivery deadlines shall be approximate only unless we have expressly stated in writing that they are binding. Delivery periods shall commence upon receipt of our confirmation of order, but not before clarification of all execution details, ex place of delivery. The customer shall only be entitled to withdraw from the contract after having granted a reasonable extension of time. We reserve the right to make partial deliveries. Claims for damages and reimbursement of expenses - for any reason whatsoever - shall be subject to the provisions set out in article 10.

In the event of any circumstances that are beyond our control within the scope of normal operating risks and obstruct or make impracticable any delivery, we shall be entitled to suspend delivery by the duration of such obstruction plus a reasonable start-up period or to withdraw from the contract for the part not yet fulfilled. The purchaser can demand a statement from us as to whether we wish to deliver within a reasonable period or withdraw. If we fail to make such a statement, the purchaser may withdraw. Our notice to the purchaser shall be deemed to be sufficient evidence that we have been prevented from delivering.

Delivery time is extended in case of such events as labour disputes, strikes and lockouts, orders from the authorities, difficulties with the procurement of materials, spoiled work or post-processing, shutdowns and staff shortage as well as shortage of means of transport, and general occurrence of unforeseen events beyond our scope of influence, by the length of duration of these events.

6. Payments shall be made upon receipt of invoice less a 3% cash discount for payment within 10 days or net after 30 days from date of invoice. Erection work and all paid labour work must be paid within 10 days without deduction of any cash discount. In case of non-cash payments, the date of the credit note will be deemed to be the date of receipt of payment. Payments received shall always be credited first against costs, then against interest and then against the earliest liability. Cheques and bills of exchange shall only be accepted as means of payment.

Any payment by bill of exchange shall be subject to a prior separate and written agreement, whereby all bill costs shall be borne by the customer and no discount can be granted. The customer shall have no right to refuse performance and no right of retention - for any legal reason whatsoever - unless we have acknowledged his claim beforehand in writing or his claim has the force of law.

The customer shall only be entitled to set off claims which have the force of law, are undisputed or acknowledged by us in writing.

7. We shall retain title to the goods supplied by us until all our claims arising from our business transactions with the customer have been satisfied - current account clause - and all bills of exchange or cheques submitted for payment by the customer have been honoured.

Any treatment or processing of goods subject to our retention of title (reserved goods) shall be carried out for us as the manufacturer in accordance with § 950 BGB (German Civil Code) without any obligation on our part. If our reserved goods are to be regarded as the main item or the main item is owned by the customer, full title to the new item shall pass to us when it is created. In other cases, we shall acquire a co-ownership interest in the new item in the proportion of the sales value of our reserved goods to the other goods used for the new item at the time of processing, intermingling, joining or mixing. The customer shall take custody of our ownership or co-ownership interest free of charge; it shall be treated as reserved goods.

Before transfer of title, our goods shall be neither pledged nor assigned as collateral without our prior consent. In addition, any third party rights or pledges shall be notified to us immediately and we shall be given all details and provided all documents necessary for intervention; otherwise the customer must bear our loss. In the latter case, our total claims against the customer shall also be immediately payable.

The customer shall be entitled to sell or to use our reserved goods in the ordinary course of business subject to the condition that the relevant claims are transferred in accordance with article 8 below. This right shall lapse upon the customer's failure to promptly meet his payment obligations towards us or in the event of any cheque or bill protests or his suspension of payments. In such cases, we shall be entitled to take back the goods provisionally at

the customer's expense and to sell them at our duly exercised discretion after a corresponding reminder has been sent to the customer. We will then pass the due amount to the customer's credit.

8. If our goods are sold before payment of our claim, the customer shall be obliged to retain our title against his purchaser until the goods have been paid for in full by the purchaser. The claim arising against the purchaser from such resale as well as any other ancillary rights or security interests of the customer resulting from the sale and any claims for compensation in case of damage to or destruction of our reserved property, including the relevant insurance sum shall hereby be assigned to us. We hereby accept this assignment. Where our co-ownership interest is sold, the relevant claims shall be assigned in the amount corresponding to the value of our interest.

The customer shall, at our request, inform us of his purchasers, notify them of the assignment made and provide us with any and all documents required to assert our rights.

As long as the customer meets his contractual obligations without delay, he shall be authorised to collect the claims assigned. He shall keep the amounts collected on our behalf separately and remit them to us immediately as soon as and as far as our claims become due. The authorisation shall lapse in case of any cheque or bill protest of the customer or his definite suspension of payments. The customer shall bear the costs incurred for any action taken against third parties and shall advance them upon request.

If the security provided to us by the retention of title and the anticipatory assignment should exceed the claims to be secured by more than 20%, we shall, at the customer's request, release paid supplies of our choice. Upon payment of all our claims by the customer, assigned claims shall pass to the customer.

9. Any complaints for obvious defects regarding the quantity or quality of our supplies and services that are identifiable upon careful inspection shall without delay, but at the latest within the period of limitation of eight days from arrival of the goods at the address of the customer or the person appointed by him, be notified in writing to us, not to our representatives. Slight deviations in dimensions and designs within the scope of defined technical tolerances shall not give rise to any right of complaint. Any rejected goods may only be returned to us with our prior written authorisation.

In case of justified complaints within the prescribed period, we shall, at our option, take remedial action by way of subsequent performance, by rectifying the defect, supplying non-defective goods or providing a credit note for the lower value calculated.

We shall be entitled to refuse subsequent performance in accordance with the statutory provisions. If we refuse subsequent performance, if any subsequent performance remains unsuccessful or if the customer cannot be reasonably expected to accept any subsequent performance, the latter shall be entitled to withdraw from the contract in compliance with the provisions of the following sentences. The customer shall only be entitled to withdraw from the contract - where a withdrawal is not excluded by law - upon the unsuccessful expiry of a reasonable period for subsequent performance set by him, unless this period was not required under the statutory provisions (§§ 281 para. 2, 323 para. 2, 440, 441 para. 1 BGB (German Civil Code)).

In case of his withdrawal, the customer shall be liable for any deterioration, destruction or loss of use resulting from any negligence or intent on his part. Any claims for damages or reimbursement of expenses of the customer shall be subject to the provisions set out in article 10.

In the case of any fraudulent concealment of a defect or in the case of any provision of a quality guarantee for the goods sold at the time of the passing of risk within the meaning of § 444 BGB (German Civil Code) (seller's declaration that the object sold has a specific property at the time of the passing of risk and that the seller, regardless of any fault on his part, intends to be answerable for any and all consequences resulting from its absence), the customer's rights shall be exclusively governed by the statutory provisions.

We shall - in addition to the statutory grounds for refusal - also be entitled to refuse subsequent performance if and as long as the customer fails to send us, at our request, the rejected goods or a sample thereof; the customer shall have no right of withdrawal for any such refusal. We may further refuse any subsequent performance if the goods concerned have been altered or modified without our consent unless the customer can prove that the defect was not caused by such alteration or modification.

The limitation period for any claims arising from defects shall be one year; in the case of goods which have been used in accordance with their intended purpose for a building and have caused its defectiveness, the limitation period shall be two years. The provisions of §§ 478, 479 BGB (German Civil Code) on recourse in the chain of suppliers shall not be affected thereby.

10. In the case of a pre-contractual, contractual or non-contractual breach of duty, including unsatisfactory delivery, tortious conduct and producer's liability, we shall only be liable for compensatory damages and reimbursement of expenses - subject to further contractual or statutory liability requirements - in the case of intent, gross negligence or slightly negligent breach of a material contractual duty (contractual duty the infringement of which jeopardises the fulfilment of the object of the contract). However - except in the case of intent - our liability shall be limited to the typical contractual damage that was foreseeable at the time the contract was entered into.

The purchaser shall not be permitted to make a claim for expenses incurred in vain. Except for any breach of material duties, our liability for slight negligence shall be excluded, but in any case be limited to the amount of the purchase price.

Any claim asserted by the customer or a third party for payment of a contractual penalty shall be excluded.

With regard to damages caused by delay, we shall only be liable for slight negligence up to the amount of 5% of the purchase price agreed with us.

The exclusions and limitations of liability set forth above shall not apply in the event that a guarantee is given with respect to the quality of the object sold within the meaning of § 444 BGB (German Civil Code) if a defect is fraudulently concealed or in the event of injury to life, physical injury or injury to health, or strict liability under the German Product Liability Act.

Any and all claims for damages against us, for any legal reason whatsoever, shall become statute-barred at the latest after one year from delivery of the goods to the customer, in the case of tortious liability from the time of knowledge, or grossly negligent ignorance, of the circumstances giving rise to the claim and the person liable to pay damages. This provision shall not apply in the case of liability for intent and in the event that a guarantee is given for the quality of the object sold, in the case of fraudulent concealment of a defect or in the event of injury to life, physical injury or injury to health, or strict liability under the German Product Liability Act. Any shorter limitation periods shall take precedence.

11. We shall be entitled to process and store any customer data obtained with regard to or in connection with the business relationship in accordance with the German Federal Data Protection Act, irrespective of whether such data is provided by the purchaser himself or by any third parties.

12. Place of performance for delivery and payment is Menden/Sauerland. The court of competent jurisdiction for any and all disputes, including disputes with regard to bills of exchange and cheques, is the Local Court (Amtsgericht) of Menden or, at our option, the District Court (Landgericht) of Arnsberg, irrespective of the value of the object in dispute. We shall, however, also be entitled to take legal proceedings against the customer at the place of his registered office.

German law shall be exclusively applicable. The application of international purchase laws is hereby excluded. Should, for any reason whatsoever, individual provisions of our terms and conditions of sale and delivery be invalid, the validity and binding nature of the other provisions shall not be affected thereby. The customer agrees, that the invalid provision shall be replaced by a valid provision that comes as close as possible to the economic meaning of the invalid provision.

13. The prices of products made of brass and copper are subject to certain fluctuations that are based on the relevant DEL listings. The prices of our brass articles are based on a DEL listing of € 150 for Ms 58, those of our copper products on a DEL value for electrolytic copper of € 200.

In case of any increase or reduction in these prices by more than € 15, a five per cent surcharge or deduction shall be made for each 15 points. The calculation of any such surcharges or deductions shall be based on the DEL listing of the date of our receipt of the order.

Valid from January 2010
