JUMO safetyM TB/TW Temperature limiter, temperature monitor according DIN EN 14 597

with LCD for mounting on 35mm DIN rails

Typ 701160/ ...

Brief description

The JUMO safety**M** TB/TW is a freely programmable temperature limiting device.
The measurement input is freely configurable for RTD temperature probes and thermocouples, as well as for current and voltage signals.
TB/TWs monitor thermal processes in systems for a set limit value.
If this is exceeded, the
built-in relay (with internal fuse) switches the system to a safe operational state and the LED K1 switches from green to red.
When the system returns to the o.k. region, the reset button (on the TB) has to be released manually using an appropriate tool.
The TW, on the other hand, is reset automatically without any external action.
The binary output 24V/20mA produces a pre-alarm signal at an adjustable temperature before reaching the limit value, which is additionally indicated via the LED KV.
TB/TWs are mounted on DIN rails and wired up by means of screw terminals with 2.5mm² max. conductor cross-section.
A PC setup program is available as an accessory, which can be used to set and store probe type, range, output action and inhibits.

All difference values within the OK range (green) are smaller than the setting for ALD=50K

Example (refer to arrow):
IN2=50°C
INP increases to 101°C and leaves the OK range (INP- In2 ≥ ALD) (101K-50K=51K).

Starting at a value of INP=99 the difference value will be back in the OK range.
The value of INP must drop additionally the hysteresis to be back into the OK range. INP=99

The area between the dot and dash lines indicate the span of the hysteresis (factory setting: 1K)

The inputs INP and IN2 are additionally monitored in regards to the limit value AL=150
