## JUMO IPC <br> IGBT Power Converter with amplitude control

## Brief description

The JUMO IPC is a power converter for controlling heater loads that previously required a transformer (either a variable transformer or a combination of transformer and thyristor power converter).
Its function is that of an electronic transformer with a pulsed DC output.
It combines the advantages of a conventional variable transformer, such as amplitude control which is the sinusoidal current loading, with the advantages of a thyristor power switch, such as current limiting, load monitoring, subordinate control action, etc. There is no electrical isolation between the supply voltage and the load voltage.
This power converter is employed wherever substantial resistive loads need to be switched.
To operate the IPC, a choke and a line filter are indispensable in addition to the IPC power converter itself. Only the chokes or line filters specified by JUMO may be used for this purpose. Thanks to the amplitude control (the current drawn from the supply is always sinusoidal), synchronous clock controls (as for burst-firing operation) and power-factor compensation networks (for the reactive power resulting from phase-control) are no longer required.

## Block diagram

Type 709050/X3 ...

## Special features

- Protective operation when power supply operated under high resistive loads (flicker)
- Operation of low voltage heaters directly at the power supply without impedance-matching transformer

■ Minimum harmonics in the instrument power supply and low weight (power transformer n/a)

- Short-circuit control when switching on
- Line current in proportion to the required power (amplitude control)
- Control independent of the heaters' resistive characteristics
- Minimum reactive power
- Compact dimensions
- The subordinate control action $\mathrm{U}^{2}, \mathrm{P}, \mathrm{I}^{2}$ can be freely chosen
- Ageing process compensation for SIC heating elements
- Indicator showing when ageing can no longer be compensated by the voltage reserve ${ }^{1}$
- Resistance limitation, protection of Molybdenum Disilicide heating elements against overheating in the upper temperature range ${ }^{1}$
- Integrated semiconductor fuses to protect the IPC in the event of an earth short ${ }^{1}$

1. Only for types 709050/X2 and ... /X3

## Technical data

## Control

| Control signal | $0(4) \ldots 20 \mathrm{~mA}$ | $\mathrm{R}_{\mathrm{i}}=50 \Omega$ |
| :--- | :--- | :--- |
|  | $0(2) \ldots 10 \mathrm{~V}$ | $\mathrm{R}_{\mathrm{i}}=25 \mathrm{k} \Omega$ |
|  | $0(1) \ldots 5 \mathrm{~V}$ | $\mathrm{R}_{\mathrm{i}}=12 \mathrm{k} \Omega \quad$ Manual control through an external $5 \mathrm{k} \Omega$ potentiometer |
| Input signal attenuation |  | Adjustment range $100 \ldots 20 \%$ |
| Base load setting |  | $0 \ldots 100 \%$ |

Voltage supply

|  | Type 709050／X1．．． | Type 709050／X2．．． | Type 709050／X3．．． |

## General characteristics

| Circuit variants | Single－phase operation |  |  |
| :---: | :---: | :---: | :---: |
| Operating modes | Amplitude control |  |  |
| Subordinate control loop | As standard：free choice between $\mathrm{U}^{2}-, \mathrm{P}-, \mathrm{I}^{2}$ control via internal switches |  |  |
| Current limiting | In operation，the load current can be set in the range of $10 \ldots 100 \% I_{N}$ by a trimmer on the front panel． This limits the rms－value of the load current． |  |  |
| Partial load failure | $20 . .100 \%$ of nominal current |  |  |
| R－control | － | Adjustment range from $R_{\text {Nom }}$ to $10 x R_{\text {Nom }}$ $\mathrm{R}_{\text {Nom }}=$ nominal voltage／nominal current |  |
| SIC reserve |  | Message indicated when the voltag | reserve for SIC heating rods is exhaust－ ed |
| Actual value output | As standard：free choice between $\mathrm{U}^{2}-, \mathrm{P}-$ ，or $\mathrm{I}^{2}$ signal via internal switches， adjustable $0 \ldots 5 \mathrm{~V}$ to $0 \ldots 10 \mathrm{~V}, \mathrm{I}_{\max } \cup 2 \mathrm{~mA}$ ，offset deviation $\leq \pm 5 \%$ |  |  |
| Control accuracy | The regulation will eliminate supply voltage variations within the tolerance range（＋15\％／－20\％）with an accuracy of $\pm 0.5 \%$ |  |  |
| Electrical connection | Control leads via plug－in screw terminals for conductor cross sections $0.5 \ldots 2.5 \mathrm{~mm}^{2}$ |  |  |
|  | in the power section via cable lugs as per DIN 46212 | in the power section via $10 \mathrm{~mm}^{2}$ ．．． $50 \mathrm{~mm}^{2}$ screw terminals | Power section via $10 \mathrm{~mm}^{2}$ ．．． $95 \mathrm{~mm}^{2}$ screw terminals |
| Semiconductor fuse | The $\mathrm{I}^{2} \mathrm{t}$ value of an external fuse must be smaller than $2000 A^{2}$ s！ | The $I^{2} t$ value of the integrated sem 200 | conductor fuse must be smaller than $0 A^{2} s$ ！ |
| Degree of protection | IP 00 as per EN 60529 | IP 10 as p | er EN 60529 |
| Protection class | Protection class I，with isolated control circuitry for connection to SELV circuits |  |  |
| Permissible ambient temperature range | $5 \ldots 40^{\circ} \mathrm{C}$（3K3 as per EN 60 721－3－3） |  |  |
| Permissible storage temperature range | $-10 \ldots+70^{\circ} \mathrm{C}(1 \mathrm{~K} 3$ as per EN $60721-3-1)$ |  |  |
| Cooling | forced convection，maximum inlet air temperature $35^{\circ} \mathrm{C}$ |  |  |
| Climatic conditions | Rel．humidity $\leq 5 \ldots 85$ \％annual average，no condensation 3K3 as per EN 60721 |  |  |
| mounting position | vertical |  |  |
| Operating conditions | The converter is designed as a built－in device as per EN 50 178，pollution degree 2， overvoltage category Ü III |  |  |
| Electromagnetic compatibility | as per DIN 61326 emitted interference：Class A－Only for industrial use－ interference immunity：to industrial requirements |  |  |
| Test voltage | as per EN 50178 |  |  |
| Creepage distances | Control section to load circuit $\div 5.5 \mathrm{~mm}$ ，control section to housing $\div 5.5 \mathrm{~mm}$ ，device can be connected to SELV circuits．SELV＝Separate Extra Low Voltage（safe low voltage） |  |  |
| Ground leakage current | The Ground leakage current of the IPC power converter used with an EMC filter in the supply cable is less than 3 mA （excluding any leakage current in the load）． |  |  |
| Housing | Metal housing |  |  |
| Power consumption of the control section | approx．50VA | max | 100 VA |
| Standard accessories | 1 operating manual B 70．9050．0．．． |  |  |

## Power loss (W)

## Note:

Power loss occurs in the form of thermal discharge at the cooling body of the power converter, at the EMC filter and choke. It has to be be discharged from the point of installation (e.g. in the switch cabinet) according to the climatic conditions!

## Type 709050/X1...and type 709050/X2...

## Type 709050/82-12-400-150-100/252

Nominal data of the device: Load voltage = 150V; load current $=100 \mathrm{~A}$ Voltage supply to the power section $=400 \mathrm{~V}$

Resistive loads and Molybdenum Disilicide heating elements: Heating element data: Load voltage = 140V; load current $=90 \mathrm{~A}$

Determine the max. load voltage actually taken (e.g. 140 V ) and find the point intersecting with the curve for the voltage supply in the power section. The $Y$ axis shows the attendant power dissipation factor of, e.g., 8.5.

The power dissipation (W) is obtained by multiplying this power dissipation factor by the load current (e.g. 90A) that flows at max. load voltage (e.g. 140V) through the load resistor

Power loss $=90(\mathrm{~A}) \times$ power dissipation factor
Power loss $=90(A) \times 8.5=765 W$

## Type 709050/92-12-400-150-100/252

Nominal data of the device: Load voltage $=150 \mathrm{~V}$; load current $=100 \mathrm{~A}$ Voltage supply to the power section $=400 \mathrm{~V}$; P control, $\mathrm{P}=6300 \mathrm{~W}$

## SIC heating elements

SIC heating element data: new: $70 \mathrm{~V} / 90 \mathrm{~A}$, old $140 \mathrm{~V} / 45 \mathrm{~A} ; \mathrm{P}=6300 \mathrm{~W}$
Determine the maximum load voltage actually taken (e.g. 70V) of the new SIC heating element and find the point intersecting with the curve for the voltage supply in the power section. The $Y$ axis shows the attendant power dissipation factor of, e.g., 6.8.

The power dissipation $(\mathrm{W})$ is obtained by multiplying this power dissipation factor by the load current (e.g. 90A)
that flows at max. load voltage (e.g. 70V) through the new SIC heating element

Power loss $=90(\mathrm{~A}) \times$ power dissipation factor

Power loss $=90(A) \times 6.8=\mathbf{6 1 2 W}$

Type 709050/83-12-400-90-200/252
Nominal data of the device: Load voltage $=90 \mathrm{~V}$; load current $=200 \mathrm{~A}$ Voltage supply to the power section $=400 \mathrm{~V}$

Resistive loads and Molybdenum Disilicide heating elements:
Heating element data: Load voltage $=75 \mathrm{~V}$; load current $=130 \mathrm{~A}$
Determine the max. load voltage actually taken (e.g. 75 V ) and find the point intersecting with the curve for the voltage supply in the power section. The Y axis shows the attendant power dissipation factor of, e.g., 7.5.

The power dissipation $(\mathrm{W})$ is obtained by multiplying this power dissipation factor by the load current (e.g. 130A) that flows through the load resistor at max. load voltage (e.g. 75V)

Power loss $=130(\mathrm{~A}) \times$ power loss factor
Power loss $=130(A) \times 7.5=975 W$

## Type 709050/93-12-400-90-200/252

Nominal data of the device: Load voltage $=90 \mathrm{~V}$; load current $=200 \mathrm{~A}$; voltage supply to the power section $=400 \mathrm{~V}$; P control, $\mathrm{P}=9000 \mathrm{~W}$

SIC heating elements
SIC heating element data: new: $45 \mathrm{~V} / 200 \mathrm{~A}$, old $90 \mathrm{~V} / 100 \mathrm{~A} ; \mathrm{P}=9000 \mathrm{~W}$
Determine the maximum load voltage actually taken (e.g. 45V) of the new SIC heating element and find the point intersecting with the curve for the voltage supply in the power section. The $Y$ axis shows the attendant power dissipation factor of, e.g., 6.8.

The power dissipation $(\mathrm{W})$ is obtained by multiplying this power dissipation factor by the load current (e.g. 200A) that flows at max. load voltage (e.g. 45V) through the new SIC heating element

Power loss $=200(A) \times$ power loss factor
Power loss $=200(A) \times 6.8=1360 W$

## General characteristics

EMC filter (for voltage supply to the power section)
$115 \mathrm{~V} / 250 \mathrm{~V} / 440 \mathrm{~V}$ AC $\mathrm{I}_{\text {Nom }}=16 \mathrm{~A}, 20 \mathrm{~A}, 32 \mathrm{~A}, 63 \mathrm{~A}$ or 100 A ,
EMC filter (for voltage supply to the control section)
$115 \mathrm{~V} / 250 \mathrm{~V}$ AC $\mathrm{I}_{\text {Nom }}=1 \mathrm{~A}$
Semiconductor fuse (2 fuses required)
extra fast 200A for $I_{\text {Nom }}=100 \mathrm{~A}$,
The $I^{2} t$ value of the semiconductor fuse must be smaller than $20000 A^{2} s$ !
(only use for type 709050/X2... and 709050/X3...!)
