# JUMO TYA 201

## Single-Phase SCR Power Controller

### For controlling resistive/inductive loads

The JUMO TYA 201 represents a consistent further development of the JUMO power controller technology. The micro-processor controlled power controller displays all parameters in a backlit LCD display and is operated using the 4 keys on the front.

SCR power controllers are employed where larger resistive and inductive loads have to be switched, e.g. in industrial kiln construction and in plastics processing. The SCR power controller comprises two SCRs connected in anti-parallel, the insulated cooling body and the control electronics.

SCR power controllers up to a load current of 32 A can either be clipped onto a 35 mm mounting rail or fitted to the wall with a mounting plate.

Units with a load current greater than 32 A have to be fitted to the wall.

Depending on their configuration via the setup program, the SCR power controllers operate with phase-angle control, in burst-firing mode or in half-wave operation.

In burst-firing mode, the phase angle can be cut back for the first half-cycle, for driving transformer loads.

Available subordinate controls are U, U<sup>2</sup>, I, I<sup>2</sup> and P control.

Use of a subordinate control ensures that fluctuations in the supply voltage do not affect the control loop during the control process.

It is possible to preset a base load and a max. output level.

During a soft start, the default phase angle of the controller is reached slowly, starting at 180 degrees, in order to avoid high starting or inrush currents.

The SCR power controllers comply with the operating conditions according to DIN EN 50178.

Grounding is required in conformity with the regulations of the responsible electrical utility company.

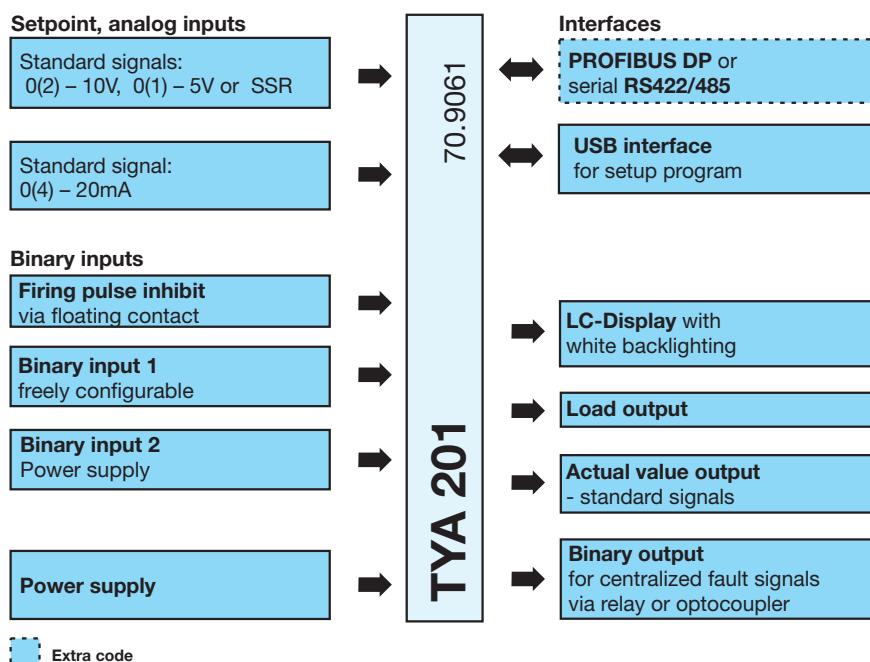

Type 709061/ ...

### Special features

- Phase angle control and burst-firing mode
- Half-wave operation for vibrators
- LCD display with info line
- Simple configuration of the device via clear text display in the operator's language
- Setup program for configuration via USB interface
- Transmission of the setup data is also possible without voltage supply to the unit (supply via USB port)
- Close installation is possible
- Mains load optimization through dual energy management
- RS422/485 interface or
- PROFIBUS DP for connection to process control systems
- Soft start function with current limiting
- Soft start function with pulse groups
- Resistance monitoring and limitation for MoSi<sub>2</sub> heating elements
- All versions in protection rating IP20
- Load monitoring for the detection of partial load failure or load short circuit "teach-in"
- Integrated diagnosis systems such as rotary-field detection
- UL Approval submitted

## Permissible load current depending on the ambient temperature and installation height

### Note:

At a device temperature of 105°C, the load current is reduced for each degree of temperature increase.  
 The power controller current is switched off completely at a device temperature of >115°C.

### Note:

In the case of air cooling, it must be noted that the effectiveness of the cooling is reduced the higher up the device is installed. As a result, the current carrying capacity of the SCR power controller decreases with such a cooler as the installation height increases as shown in the image.

## Connection diagram

The connection diagram contained in the data sheet provides preliminary information about the connection possibilities. For electrical connection, only use the installation instructions or the operating instructions. The knowledge and correct technical execution of the safety instructions, and observance of the warnings contained in these documents are prerequisite for installation, electrical connection and commissioning/start-up as well as for safety during operation.

### Type 709061/X-0X-250-XXX-XXX-XX-25X

#### Example:

#### Voltage supply of the fan in case of type 709061/X-0X-250-XXX-400-XX-25X

Depending on the load voltage, the fan terminal X14 must be supplied with the voltage specified below.

The lead protection must be between 2 A and a maximum of 5 A.

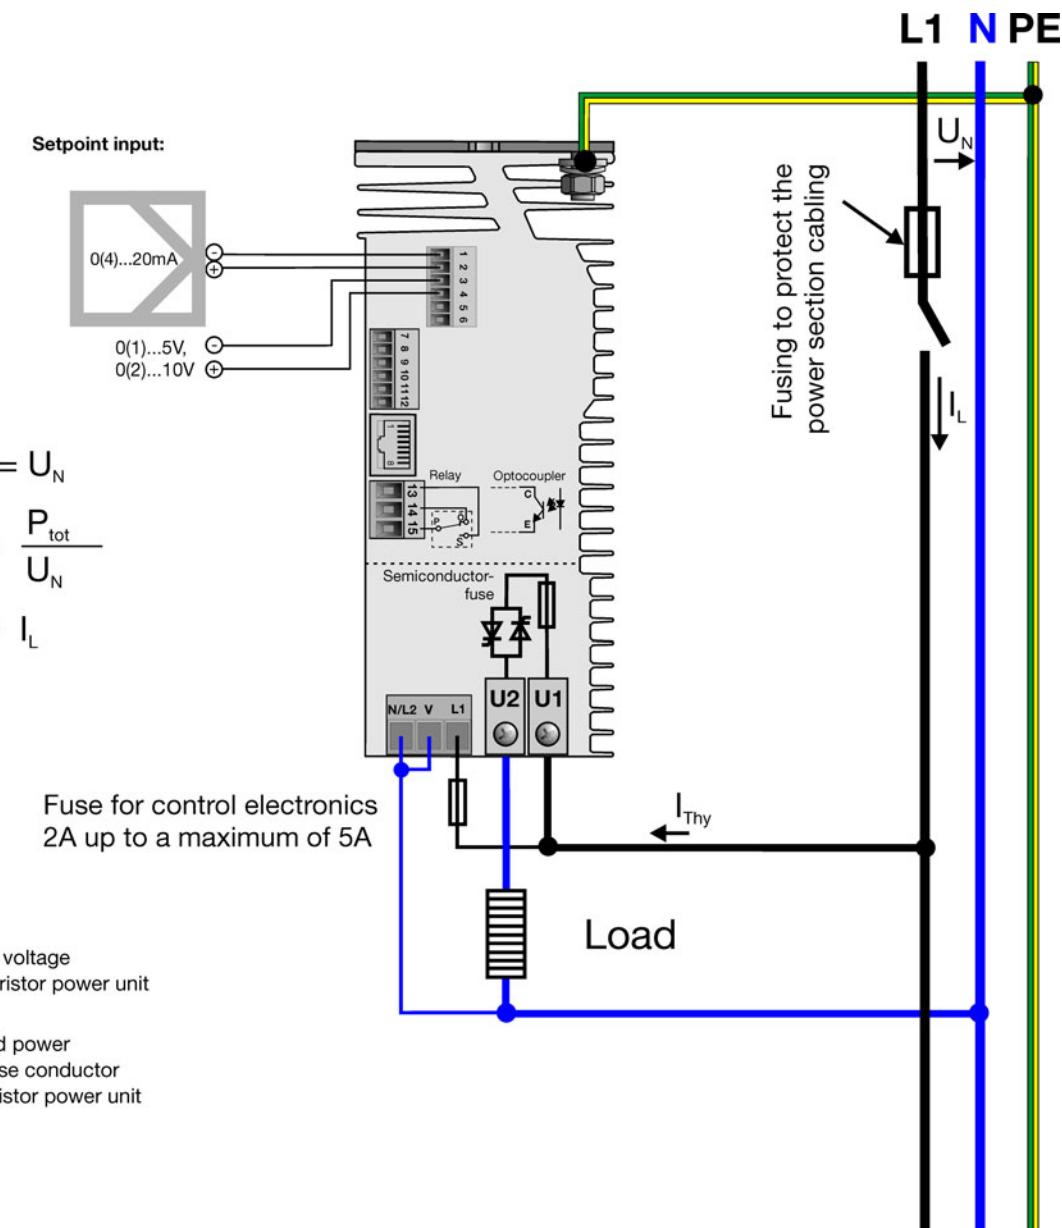

The fan is temperature-controlled, switches on automatically when the device temperature reaches 85 °C, and remains in operation until the device temperature falls below 70 °C.

Load voltage on the power controller	Tolerances	Fan specifications
Load voltage AC 24V	-20 to +15 %, 45 to 63 Hz	AC24V / 30VA
Load voltage AC 42V	-20 to +15 %, 45 to 63 Hz	
Load voltage AC115V	-15 to + 6 %, 45 to 63 Hz	AC 115V / 30VA
Load voltage AC230V	-15 to + 6 %, 45 to 63 Hz	AC 230V / 30VA
Load voltage AC265V		
Load voltage AC400V		
Load voltage AC460V		
Load voltage AC500V		

## Wiring

### Single-phase operation: phase – N

**Note:**

In the case of power controllers with a load current of 250 A, the fan terminal X14 must also be supplied with the specified voltage!

⇒ Siehe "Example: Voltage supply of the fan in case of type 709061/X-0X-250-XXX-400-XX-25X" see page 14..

Order code

Order example

<sup>a</sup> UL approval in preparation<sup>b</sup> Load voltage = voltage supply for control electronics
**Important information:**
Subordinate control loop U<sup>2</sup>, code 100: voltage controlSubordinate control loop I<sup>2</sup>, code 010: enables partial load failure detection, dual energy management, and current limiting

Subordinate control loop P, code 001: enables partial load failure detection, dual energy management, current limiting, free-running economy circuit, and R control

At a load current of 250 A, observe voltage supply for fan!
